Hiring Manager, Linktree

Dear Hiring Manager,

I am writing to apply for the Data Analyst role on Linktree's Business Analytics team. What drew me to it is the shape of the job itself: an analyst who owns a question end to end, from framing it with a stakeholder through to writing the SQL and landing a recommendation someone acts on, rather than one who hands off a chart and moves on. That is exactly how I already work, and doing it inside a product used by tens of millions of creators is the kind of scale where that discipline compounds fast.

The clearest example is a pricing and margin engagement I ran end to end for a restaurant chain client operating across Australia and New Zealand. I was the sole analyst on the account: I framed the question directly with the Chief Procurement Officer and the food category manager, built a structured product catalog of around 3,000 items, modelled the transaction data in SQL, and shipped a pricing-decision dashboard that let the team drill from category-level trend down to the specific product, venue and supplier driving overspend. I ran the client relationship myself through bi-weekly and monthly stakeholder meetings, and over a year that work helped the client find around 30% savings in their largest spend category. That is question to SQL to recommendation, run independently, with a real number at the end of it.

Underneath that client work is a genuine SQL and Python base. I led a spend-categorisation model across roughly A\$12B of client transaction data (TF-IDF features, a one-vs-all logistic regression, and a Pareto split between manual review and model output) that cut a month-long manual categorisation cycle to a single day's run, and I standardised how one client's data is measured across 5 global regions and 13 sub-regions so every region reports against one consistent set of definitions. I have also built Facit, a live SaaS product for independent cafes that gives owners a weekly read on revenue, food cost percentage, and gross margin from messy, unintegrated POS and supplier data. Shipping something a non-technical operator opens every week and trusts is the closest thing I have to building product analytics for an end user, and it is where I go to test whether a metric definition actually holds up outside a spreadsheet.

What makes Linktree the right next step is that the mechanics of the job carry straight over: comfortable owning ambiguity, fluent in SQL, and used to being the person a stakeholder trusts to turn a question into a decision. I have done that for enterprise clients where the stakes were procurement spend and margin; doing it for a product used by tens of millions of creators is the same discipline pointed at a bigger, faster-moving canvas, and it is exactly the kind of work I want to be doing next. I would welcome the chance to discuss the role further. You can reach me at dhruvnirmal2111@gmail.com or +61 406 259 619.

Yours sincerely,

Dhruv Nirmal
