

Dhruv Nirmal

Melbourne, Australia | dhruvnirmal2111@gmail.com | +61 406 259 619 | LinkedIn

PROFESSIONAL SUMMARY

Data Analyst & Engineer with 3+ years delivering analytics, dashboards, and data-quality programs across enterprise and government clients. Experienced building Power BI and Tableau reporting solutions, SQL-based data pipelines across Snowflake and SQL Server, and AI-augmented workflows that streamline exception reporting and data QA - directly mapping to Melbourne Water's Works Delivery analytics mandate. Proven at translating operational data from multiple systems into performance metrics, KPI benchmarks, and actionable insights for senior stakeholders in complex environments.

KEY SKILLS

Analytics & BI: Power BI, Tableau, Snowflake, SQL Server, Data Storytelling, KPI Analytics, Dashboards, Benchmarking, Exception Reporting

Data Engineering & QA: Python, SQL, ETL Pipelines, Data Cleaning, Data Validation, Anomaly Detection, Data Quality Controls, KNIME

AI & Automation: LLM Workflows (Claude, ChatGPT), Agentic AI, Workflow Automation (Python, MS Graph API), Automated Reporting, Process Streamlining

Cloud & Infrastructure: Azure, AWS (S3, EC2, IAM), Databricks, Terraform, Docker

Statistics & Modelling: Statistical Methods, Predictive Modelling, Forecasting, Logistic Regression, Scikit-learn

Soft Skills: Stakeholder Collaboration, Client-Facing Delivery, Cross-functional Communication, Problem Framing

EXPERIENCE

Data Analyst & Engineer, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 - Present | Melbourne, Australia

- Owned end-to-end data pipeline for the company's largest client - ~6M invoice rows plus PO and lookup datasets across 13 sub-regions globally; replaced a manual KNIME process with fully automated SQL Server ingestion (Microsoft Graph API), saving ~3–3.5 hours of manual processing weekly.
- Built automated data-validation controls (row/column counts, data-type checks, discrepancy logging) that flag issues and email client and internal teams for review, raising delivery quality for the highest-billing account.
- Developed and maintained 16+ Tableau dashboards enabling procurement and finance teams to monitor supplier spend, track KPIs, and identify cost-optimisation opportunities across multiple datasets.
- Deployed multi-agent AI workflow (5 agents + orchestrator) to validate client datasets prior to delivery, catching data integrity issues before they reached stakeholders.
- Implemented LLM-assisted reporting workflows (Claude, ChatGPT) to streamline analytics-script development and accelerate generation of structured client performance reports, cutting delivery turnaround ~50%.
- Performed anomaly detection on procurement datasets to identify cost-leakage patterns, contributing to ~15% client savings; applied predictive modelling (classification) to standardise transaction data for downstream reporting.
- Built agentic AI workflow to auto-generate structured client progress reports from analytics outputs, eliminating manual report assembly and standardising client-facing deliverables.
- Built and maintained 20+ automated ETL pipelines processing millions of transactions monthly across 5 enterprise clients (Python, SQL, Azure), reducing manual reporting effort ~40%.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 - Nov 2023 | Melbourne, Australia

- Deployed a Power BI analytics solution adopted by senior Department of Transport stakeholders; presented system architecture and outcomes to cross-functional teams.
- Built a distributed anomaly-detection pipeline (Databricks, PySpark) to surface data-quality issues in government procurement datasets, improving detection accuracy ~20%.
- Engineered scalable data transformation layers to process and standardise large government procurement datasets in cloud environments.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 - Jul 2021

- Analysed blast-wave datasets using statistical models and Butterworth filtering, improving noise-level prediction accuracy ~20% and refining defence-equipment designs ~10%.
- Compiled findings into a 70-page technical report (MATLAB, Excel), communicating quantitative results to research stakeholders.

PROJECTS

Global Multi-Region Spend Analytics Platform (SQL Server, Python, Power BI, Azure)

- Designed and owns the full analytics pipeline for a global spend dataset (~6M rows, 13 sub-regions); built automated data ingestion, a ~11–12k-rule spend-categorisation engine, multi-language data cleaning, and advanced spend analysis (rolling windows, PO splitting) into operational dashboards. Saved ~3–3.5 hrs/week versus prior manual process.

Cloud Data Platform - Snowflake + Power BI (AWS, Terraform, Snowflake, Power BI)

- Provisioned full cloud infrastructure as code (S3, IAM, EC2); built automated API-to-Snowflake ingestion pipeline and connected Power BI reporting layer; modular multi-environment design (dev/staging/prod) for reproducible deployments.

End-to-End Analytics & Decision Support System (Python, AI automation, forecasting, BI)

- Integrated 8+ data sources into a centralised analytics platform for a client; built AI-driven workflows for automated reporting and insight generation, short-term operational forecasting, and performance benchmarking against external indicators - resulting in ongoing client engagement.

Multi-Agent Data QA Validation Workflow (Claude, Python, agentic AI)

- Designed a 5-agent + orchestrator pipeline to validate client datasets prior to delivery; caught data integrity issues systematically, raising consistency and quality of analytics outputs delivered to enterprise clients.

EDUCATION

Master of Data Science, Monash University | Feb 2022 - Dec 2023

Statistics I & II, Machine Learning, Applied Forecasting, Communicating with Data, High Dimensional Analysis

Bachelor of Engineering, Thapar University | May 2017 - May 2021

Mathematics I/II/III, Statistics, Analog & Digital Electronics
