## PROFESSIONAL SUMMARY

I take a fuzzy business question, work out what evidence actually answers it, then go get that evidence: write the SQL, model the data, build the view, and stay with it until the recommendation lands. That is the job I have run for two years as the day-to-day analyst on enterprise client accounts at a data and analytics consultancy, framing asks directly with senior stakeholders such as a Chief Procurement Officer and category managers, and standardising the metrics a whole client's regional teams report against. I have also built Facit, a live product that turns messy real-world data into a weekly profitability call for a non-technical cafe owner, the closest thing I have to shipping analytics an end user opens every week and trusts. Underneath sits a genuine SQL and Python base, including a categorisation pipeline built across roughly A\$12B of client spend, and I want to bring that same question-to-recommendation discipline to Linktree's Business Analytics team.

## KEY SKILLS

**SQL & Data Modelling:** SQL (joins, window functions, CTEs), Python, Transaction-Level Data Modelling, Snowflake, Statistical Analysis, Forecasting

**BI & Self-Serve Tooling:** Tableau, Power BI, Dashboard Design, Metric Definition & Documentation, Data Storytelling

**Analytics Delivery:** Ambiguous-to-Recommendation Problem Framing, Senior Stakeholder Communication, Written & Verbal Reporting (memos, decks), Reproducible & Version-Controlled Analyses

**Cloud & Infrastructure:** AWS (S3, Athena, Glue), Azure, Databricks, Terraform (IaC), Docker

## EXPERIENCE

### Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

Sole analyst on multiple enterprise client accounts at a data and analytics consultancy: partners directly with senior stakeholders (Chief Procurement Officers, category managers, general managers) to scope ambiguous commercial questions, model transaction-level data in SQL, and turn the analysis into recommendations and dashboards their teams use weekly.

- Owned an ambiguous pricing and margin question end to end for an AU/NZ restaurant chain client: framed it with the Chief Procurement Officer and category managers, modelled product and transaction data in SQL, and built a pricing-decision dashboard drilling from category-level trend down to product, venue and supplier. Delivered around 30% savings in the client's largest spend category over a year.
- Standardised how the firm's largest client account measures spend across 5 global regions and 13 sub-regions (~6M invoice rows), replacing a manual upload process with automated, validated SQL pipelines using rolling 4-week windows, so every region reports against one consistent set of definitions.
- Built and led a Python categorisation model (TF-IDF, one-vs-all logistic regression, feature engineering on spend value and line count) across roughly A\$12B of client transaction data, cutting a categorisation cycle from 1 to 1.5 months of manual work to a single day, and documented it into a pipeline now used across other client accounts.

- Built and maintained 16+ Tableau dashboards used weekly by procurement and finance stakeholders to self-serve KPI tracking and cost-optimisation opportunities without writing SQL themselves.
- Built a Prophet-based forecasting model for a fresh-produce client to plan raw-material and chemical inventory three months ahead, incorporating external price drivers, and delivered it on a dashboard within a 12.5 to 14% error margin.
- Automated client reporting with Python, SQL and integrated LLM tools, and built an agentic QA workflow to validate datasets before delivery, standardising documentation and cutting reporting turnaround by around 50% across the analyst team.

#### **Data Engineer Intern, Victorian Centre for Data Insights (VCDI)**

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a Power BI analytics solution adopted by senior Department of Transport stakeholders; presented system architecture and findings to cross-functional teams.
- Engineered a distributed anomaly-detection pipeline (Databricks, PySpark) on government procurement data, improving detection accuracy by about 20%.

#### **Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO**

Jan 2021 to Jul 2021

- Analysed blast-wave datasets using statistical models and Butterworth filtering; improved noise-level prediction accuracy by about 20% and refined defence-equipment designs by about 10%.

## **PROJECTS**

#### **Facit, cafe profitability SaaS (Python, BI, forecasting, product metrics) -- personal build**

- Built Facit ([myfacit.com](https://myfacit.com)) as a multi-tenant SaaS for independent cafes: unifies POS transactions, staff wages and 14 suppliers' invoices into one model so an owner knows every week whether last week made money, why, and what to fix.
- Defined and shipped a weekly metrics pulse (revenue, wage cost %, food cost %, gross margin) plus menu engineering and supplier price-creep detection, with a revenue forecast for the week ahead: one canonical set of metric definitions in a self-serve view, the same pattern a product analytics team relies on.
- Built with Neighbours Cafe, St Kilda as the live design partner, designing around messy real-world data and a non-technical end user rather than a clean spec.

#### **Cloud data platform on Snowflake (AWS, Terraform, Snowflake, Power BI) -- personal build**

- Provisioned a reproducible, version-controlled cloud environment with Terraform (S3, IAM, EC2) and built an automated ingestion pipeline from external APIs into Snowflake, feeding a Power BI layer, across dev, staging and prod environments.

## **EDUCATION**

#### **Master of Data Science, Monash University | Feb 2022 to Dec 2023**

Statistics I & II, Machine Learning, Communicating with Data, Applied Forecasting

#### **Bachelor of Engineering, Thapar University | May 2017 to May 2021**

Mathematics I/II/III, Statistics, Entrepreneurship
