Hiring Team, Caterpillar

Dear Hiring Manager,

I'm writing to apply for the Junior Data Analyst role at Caterpillar. The position lines up well with how I work: taking data from multiple sources, making sure it's clean and trustworthy, and turning it into reports and dashboards that help people make better decisions. That's the core of what I do every day in my current role, and I'm looking for an opportunity to do it in a larger engineering and industrial context where the underlying business decisions carry real weight.

At PI Data Analytics I've been running the analytics account for a restaurant chain across Australia and New Zealand as the sole analyst on the engagement. That meant collecting and structuring data from scratch, about 3,000 products catalogued and then tracked for price movements across venues and suppliers, building dashboards the client's CFO and Chief Procurement Officer used in monthly decision meetings, and presenting findings in plain language that translated directly into purchasing negotiations. The outcome was approximately A\$2M in annual savings in their largest spend category. It's a good example of the work I find most satisfying: messy inputs, structured analysis, and a clear recommendation the business can act on.

On the technical side, I write SQL daily, including joins across multiple tables, window functions, and subqueries to pull the underlying data for those reports. I build and maintain automated ETL pipelines in Python that process millions of transactions monthly for five enterprise clients, and I've built 16+ Tableau dashboards alongside Power BI solutions for government stakeholders during my internship. I'm also comfortable with the broader data stack, Azure, Snowflake, PostgreSQL, and cloud infrastructure, so I can work with data wherever it lives and help set up repeatable, documented processes around it.

Caterpillar operates at a scale and in a domain where data quality and reliable reporting genuinely matter: equipment performance, supply chain, and financial results that affect real operations. My experience working with procurement and transaction data across large enterprise clients translates directly to that environment. I'm used to validating data carefully before it reaches a stakeholder, documenting the methodology behind each analysis, and collaborating with operational and finance teams who need clear outputs rather than technical detail. I'd welcome the chance to bring that same rigour to Caterpillar's analytics team.

I'd be glad to discuss how my background fits the role. Please feel free to reach out at dhruvnirmal2111@gmail.com or +61 406 259 619.

Kind regards,

Dhruv Nirmal
