PROFESSIONAL SUMMARY

I turn raw, multi-source data into the Tableau dashboards, KPI scorecards, and trend analysis that business stakeholders actually use to make decisions. At a procurement analytics consultancy I own end-to-end delivery for enterprise clients: gathering and cleaning supplier and transaction datasets, writing the SQL to extract and transform the data, building the visualisations, and presenting findings directly to CFOs, procurement officers, and category managers. I have shipped 16+ production Tableau dashboards, driven roughly A\$2M in client savings through pricing analysis, and deployed a Power BI solution adopted by government stakeholders, all sitting on a solid Python and SQL base.

KEY SKILLS

Analytics & BI: Tableau Desktop, Tableau Server, Power BI, Data Storytelling, KPI Analytics, Scorecards, Dashboards, Statistical Analysis, Trend Analysis, Reporting

Data & SQL: SQL, Python, Data Cleaning, Data Modelling, ETL Pipelines, KNIME, Snowflake, Multi-source Data Integration

Tools & Platforms: Microsoft Excel (advanced), Azure, AWS, Databricks

Soft Skills: Stakeholder Presentations, Cross-functional Collaboration, Requirements Gathering, Problem-Solving, Client Communication

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

Client-facing analytics consultancy serving enterprise procurement teams across Australia and New Zealand; owned multiple client accounts end-to-end as the sole analyst.

- Designed, built, and maintained 16+ Tableau dashboards for enterprise procurement and finance teams, enabling stakeholders to monitor supplier spend, track category-level KPIs, identify cost-optimisation opportunities, and drill into product and venue-level detail.
- Owned a restaurant-chain client account end-to-end (sole analyst): structured a 3,000 to 3,500 product catalog, built a pricing-decision dashboard tracking price movements across categories and suppliers, and ran bi-weekly meetings with the CFO, Chief Procurement Officer, category managers, and general managers, delivering roughly A\$2M in identified savings in one major spend category.
- Performed anomaly detection and trend analysis on large procurement datasets, surfacing cost-leakage patterns and actionable insights that contributed to roughly 15% in cost savings across client accounts.
- Gathered and cleaned complex, multi-source datasets from 5 enterprise clients (SQL, Python), wrote SQL queries to extract, transform, and validate procurement transaction data, and ensured data accuracy and integrity before delivery.
- Presented findings and analysis to senior executives and non-technical business stakeholders, translating data outputs into plain-language recommendations and identifying business opportunities from the data.
- Automated client reporting workflows (Python, SQL, KNIME), cutting reporting turnaround by roughly 50% and standardising repeatable analytics processes across the team.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built and delivered a Power BI analytics solution that was adopted by senior Department of Transport stakeholders; presented system architecture and model outcomes to cross-functional teams.
- Developed a distributed anomaly-detection pipeline (Databricks, PySpark) to surface data-quality issues in government procurement datasets, improving detection accuracy by roughly 20%.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave datasets using statistical models and Butterworth filtering, improving noise-level prediction accuracy by roughly 20% and refining defence-equipment designs by roughly 10%.
- Compiled findings into a 70-page quantitative technical report (MATLAB, Excel), communicating results to research stakeholders.

PROJECTS

Restaurant Chain Pricing and Supplier Analytics (Python, SQL, Tableau)

- Built an end-to-end pricing-decision platform for a restaurant chain operating across Australia and New Zealand: structured a 3,000 to 3,500 product catalog, developed a dashboard tracking price movements and cost leakage across products, venues, and suppliers, and added a supplier-onboarding tracker with substitute-product flagging. Identified roughly A\$2M in savings in one spend category through data-driven pricing analysis.

Inventory Demand Forecasting with Dashboard (Python, Prophet, BI Dashboard)

- Built a time-series forecasting model (Prophet) for a fresh-produce client to project raw material and chemical inventory requirements 3 months ahead, incorporating external price drivers such as sea-freight trends. Delivered results on a client-facing dashboard; achieved roughly 12.5 to 14% forecast error, within the client's accepted tolerance.

Power BI Analytics Platform, Dept of Transport (Power BI, Databricks, PySpark)

- Designed and deployed a Power BI analytics solution for Victorian government procurement data; presented findings to senior Department of Transport stakeholders and cross-functional teams, where it was adopted for ongoing use.

Cloud Data Platform with Snowflake and Power BI (AWS, Terraform, Snowflake, Power BI)

- Provisioned cloud infrastructure as code (AWS: S3, IAM, EC2); built an automated API-to-Snowflake data ingestion pipeline and connected a Power BI reporting layer; modular multi-environment design (dev, staging, prod) for reproducible analytics deployments.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Statistics I & II, Machine Learning, Applied Forecasting, Communicating with Data, High Dimensional Analysis

Bachelor of Engineering, Thapar University | May 2017 to May 2021

Mathematics I/II/III, Statistics, Analog & Digital Electronics
