PROFESSIONAL SUMMARY

I turn messy operational data from multiple source systems into the performance metrics, KPI benchmarks, and exception reporting that teams actually run on. My day-to-day is work-order-level transaction data: tracking supplier and service-provider performance, surfacing cost-leakage and data-quality issues, and getting clean, trusted numbers in front of the people making decisions. I build the full chain myself, from automated ingestion and validation in SQL Server through to production Power BI and Tableau dashboards, and I have shipped agentic AI workflows (multi-agent data QA and automated reporting) on top of a solid Python, SQL, and statistics base. That combination of hands-on BI, data engineering, and production AI is an uncommon one for a single analyst.

KEY SKILLS

Analytics & BI: Power BI, Tableau, Snowflake, SQL Server, Data Storytelling, KPI Analytics, Dashboards, Benchmarking, Exception Reporting

Data Engineering & QA: Python, SQL, ETL Pipelines, Data Cleaning, Data Validation, Anomaly Detection, Data Quality Controls, KNIME

AI & Automation: LLM Workflows (Claude, ChatGPT), Agentic AI, Workflow Automation (Python, MS Graph API), Automated Reporting, Process Streamlining

Cloud & Infrastructure: Azure, AWS (S3, EC2, IAM), Databricks, Terraform, Docker

Statistics & Modelling: Statistical Methods, Predictive Modelling, Forecasting, Logistic Regression, Scikit-learn

Soft Skills: Stakeholder Collaboration, Client-Facing Delivery, Cross-functional Communication, Problem Framing

EXPERIENCE

Data Analyst & Engineer, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

- Owned the end-to-end analytics pipeline for the company's largest client: roughly 6M work-order-level transaction rows plus PO and lookup datasets. Standardised data-capture formats across 13 external data submitters, then replaced a manual KNIME process with fully automated SQL Server ingestion via the Microsoft Graph API, cutting about 3 to 3.5 hours of manual work each week.
- Built a data QA program with automated row and column counts, data-type checks, and discrepancy logging that flags integrity issues and routes them to client and internal teams for review before delivery.
- Delivered 16+ Tableau dashboards that let stakeholder teams monitor supplier and service-provider performance, track KPIs, spot cost-leakage trends, and act on exception data across multiple datasets.
- Shipped a multi-agent AI workflow (5 agents plus an orchestrator, Python, Claude) that validates client datasets before delivery, a production QA control that systematically catches data-integrity issues before they reach stakeholders.
- Deployed agentic AI workflows (Claude, ChatGPT) to auto-generate structured client performance reports and speed up analytics-script development, cutting delivery turnaround by about 50%.

- Applied anomaly detection to surface cost-leakage patterns in operational datasets, contributing to about 15% client savings, and built a predictive ML model for chemical consumption at an industrial client, forecasting production inputs from process-level operational data.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Deployed a Power BI analytics solution adopted by senior Department of Transport stakeholders; presented system architecture and outcomes to cross-functional teams.
- Built a distributed anomaly-detection pipeline (Databricks, PySpark) to surface data-quality issues in government procurement datasets, improving detection accuracy by about 20%.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave datasets using statistical models and Butterworth filtering, improving noise-level prediction accuracy by about 20% and refining defence-equipment designs by about 10%.
- Compiled findings into a 70-page technical report (MATLAB, Excel), communicating quantitative results to research stakeholders.

PROJECTS

Global Multi-Region Spend Analytics Platform (SQL Server, Python, Power BI, Azure)

- Designed and own the full analytics pipeline for a global spend dataset (roughly 6M rows, 13 sub-regions): automated data ingestion, an 11 to 12k-rule spend-categorisation engine, multi-language data cleaning, advanced spend analysis (rolling windows, PO splitting), and operational dashboards. Saved about 3 to 3.5 hours a week versus the prior manual process.

Cloud Data Platform, Snowflake + Power BI (AWS, Terraform, Snowflake, Power BI)

- Provisioned full cloud infrastructure as code (S3, IAM, EC2); built an automated API-to-Snowflake ingestion pipeline and connected Power BI reporting layer; modular multi-environment design (dev, staging, prod) for reproducible deployments.

End-to-End Analytics & Decision Support System (Python, AI automation, forecasting, BI)

- Integrated 8+ data sources into a centralised analytics platform; built AI-driven workflows for automated reporting and insight generation, short-term operational forecasting, and performance benchmarking against external indicators, now in ongoing client use.

Multi-Agent Data QA Validation Workflow (Claude, Python, agentic AI)

- Designed a 5-agent plus orchestrator pipeline to validate client datasets before delivery; caught data-integrity issues systematically, raising the consistency and quality of analytics outputs across enterprise clients.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Statistics I & II, Machine Learning, Applied Forecasting, Communicating with Data, High Dimensional Analysis

Bachelor of Engineering, Thapar University | May 2017 to May 2021

Mathematics I/II/III, Statistics, Analog & Digital Electronics

Eligibility: Victorian Driver's Licence held. Available for travel to MW sites (ETP, WTP, Winneke, SERO, Docklands).
