Hiring Team, Enterprise Data Platform, UniSuper, Melbourne

Dear Hiring Team,

I'd like to apply for the Data Analyst role. I spend my days doing pretty much what this role describes: working with stakeholders to turn business questions into reporting they can actually use. I'd like to do that for an organisation whose purpose is helping people retire well.

I currently run BI and reporting for five enterprise client accounts at a consultancy, on my own. That means I'm the person who sits with a stakeholder to work out what they actually need, writes the SQL, builds the dashboard, and then explains what it's telling them. I've built 16+ Tableau dashboards and a Power BI solution that senior government stakeholders still use, and on one account the pricing analysis I put together helped the client find around A\$2M in savings in a single category. I'm comfortable presenting to people up to CFO level and putting the technical side into plain language.

Something I care about, maybe more than most analysts, is the data being right before it reaches anyone. On my largest account I work across a lot of source datasets and the teams who own them, and I've built standardised conventions, automated validation and documentation so the reporting stays accurate and people can trust it and use it themselves. I've also built AI-driven automation that the whole analyst team now uses to generate client reports, with a checking step so the output stays reliable as more people rely on it. I like building things that save time for more than just me.

UniSuper appeals to me because it pairs a serious data platform with work that genuinely matters, and because it's a place I could grow into financial services while doing the hands-on, stakeholder-facing analytics I enjoy most. I'd welcome the chance to talk about how I could contribute.

Best regards,

Dhruv Nirmal
