PROFESSIONAL SUMMARY

I'm a data analyst who works closely with stakeholders to turn business questions into reporting they can act on. I run BI and reporting across five enterprise client accounts, from working out what someone really needs through to the SQL, the Power BI or Tableau dashboard, and what it means, and I care as much about the data being right and documented as the report on top of it. On one account, the pricing analysis I structured helped the client find around A\$2M in savings in one spend category.

KEY SKILLS

BI & Analytics: Advanced SQL, Power BI, Tableau, Excel, Python, Data Visualisation, KPI Dashboards, BAU and Ad Hoc Reporting, Requirements Gathering

Data & Cloud: Data Warehousing, ETL, Data Validation and Quality, Documentation, Azure, Databricks, PySpark

Stakeholder & AI: Stakeholder Management, Data Literacy, LLM and Agentic Automation (Claude, ChatGPT) with AI-Output QA

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

- Independently manage BI delivery and stakeholder relationships across five enterprise client accounts, translating business needs into reporting and presenting outputs directly to senior executives.
- Owned a restaurant-chain client account end to end as sole analyst: built a pricing-decision dashboard and ran bi-weekly meetings with the CFO, Chief Procurement Officer and category managers, helping the client identify roughly A\$2M in savings in one major spend category.
- Designed and maintained 16+ Tableau dashboards giving stakeholders self-service visibility into spend, KPIs and cost-optimisation opportunities, and documented metrics so they could explore data without analyst help.
- Built AI-driven automation adopted across the whole analyst team: an LLM-based workflow that auto-generates client reports and saves roughly 12 to 15 hours a week, with a multi-agent QA step that validates outputs before delivery so it stays accurate and governed at scale.
- Manage the end-to-end data for the company's largest client account (5 regions, 13 sub-regions, multiple source datasets): coordinate with the regional teams and data owners, standardise submission conventions, run automated validation, and document the process; also automated 20+ recurring reporting jobs to BAU SLAs, cutting manual effort roughly 40%.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built and delivered a Power BI analytics solution adopted by senior Department of Transport stakeholders, plus a distributed anomaly-detection pipeline (Databricks, PySpark) that improved detection accuracy roughly 20%.

PROJECTS

MyFacit: Analytics & Decision-Support Platform (SQL, Python, BI, Forecasting)

- Centralised analytics platform for a small hospitality business, integrating 8+ data sources with dashboards and short-term forecasting; now in pilot with a local business.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Bachelor of Engineering, Thapar University | May 2017 to May 2021
