## PROFESSIONAL SUMMARY

I'm a data analyst who turns messy data into reporting and dashboards that stakeholders actually use to make decisions. I run analysis end to end: ingesting and cleaning data, exploring it, building and maintaining reports, and explaining what it means to people who aren't technical. On one account, the analysis I put together helped a client find around **A\$2M** in savings. I'm strong in SQL, Excel and Power BI and Tableau, with Python for deeper analysis.

## KEY SKILLS

**Analysis & BI:** SQL, Excel, Power BI, Tableau, exploratory data analysis, dashboards, KPI and BAU reporting, ad hoc analysis, requirements gathering, data storytelling

**Data & Programming:** Python (pandas, numpy), data cleaning, data modelling, ETL, data validation and quality, documentation, Databricks, PySpark, Snowflake, Azure

**Stakeholder:** stakeholder communication, presenting to senior executives, cross-functional collaboration

**Modelling (supporting):** classification, time-series forecasting (Prophet), anomaly detection, scikit-learn

## EXPERIENCE

### Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

A data and analytics consultancy. I own analysis and reporting for enterprise clients end to end and present findings to senior stakeholders. Selected engagements:

#### Pricing and cost analysis - multi-venue restaurant group (AU/NZ)

- Problem: the client felt their supply costs were too high but couldn't see where the money was going.
- Approach: built a product catalogue of roughly 3,000 to 3,500 items, then a dashboard tracking price movement and cost leakage by product, venue and supplier, using SQL and Python (pandas, numpy); presented findings to the CFO and category managers.
- Result: helped them identify close to 30% savings, roughly **A\$2M** over a year, in their largest category.

#### BI and reporting - enterprise clients

- Built and maintained 16+ Tableau dashboards for procurement and finance teams, giving stakeholders self-service visibility into spend, KPIs and cost-optimisation opportunities.
- Documented metrics and definitions so stakeholders could explore the data without analyst help, cutting repeat manual reporting requests.

#### Data quality and documentation - largest client account (multi-region)

- Coordinate data across 5 regions and 13 sub-regions with the teams that own it; standardised submission and naming conventions, built automated validation that flags discrepancies before they reach a report, and documented the process so it stays consistent as it scales.

#### Reporting automation - internal, my own firm

- Built an internal workflow that auto-generates client reports from our analytics outputs, with a QA check on the output; adopted across the analyst team (around 25 to 30 accounts), saving roughly 12 to 15 hours a week.

#### **Data Engineer Intern, Victorian Centre for Data Insights (VCDI)**

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a distributed anomaly-detection pipeline in Databricks with PySpark on large-scale government data, and delivered the findings through a Power BI solution adopted by senior Department of Transport stakeholders; detection accuracy improved by about 20%.

### **PROJECTS**

#### **MyFacit: Analytics and Decision-Support SaaS for Hospitality**

- Centralised analytics platform integrating 8+ data sources with dashboards, short-term forecasting and pricing and product-mix insights; in pilot with a local business and in active use.

### **EDUCATION**

**Master of Data Science, Monash University | Feb 2022 to Dec 2023**

**Bachelor of Engineering, Thapar University | May 2017 to May 2021**
