Hiring Team

Financial Services Consulting Practice

Quantum, Australia

Dear Hiring Team,

I am writing to apply for the Data Scientist (Consulting) role in Quantum's Financial Services practice. The combination of AI-first delivery, embedded client partnership, and the explicit priority placed on data scientists who use AI with judgement and go into building with it makes this one of the clearest role fits I have encountered in my search.

I work at Purchasing Index Data Analytics (part of Comprara Group) in a client-facing analytics consulting capacity, serving enterprise clients across Australia and New Zealand. In that role I have owned accounts end-to-end as sole analyst, framed vague commercial problems into structured analytical plans, and delivered results that moved the needle. The most concrete example: I ran a restaurant chain engagement (AU/NZ) directly, with bi-weekly and monthly progress meetings with the CFO, Chief Procurement Officer, category managers and general managers, and built pricing-decision and supplier dashboards that surfaced how prices moved across ~3,000-3,500 products and identified approximately A\$2M per year in savings (~30%) in their largest category by pinpointing which products, venues and suppliers were driving the overspend. That kind of end-to-end ownership, ambiguous brief to quantified outcome, is what I understand Quantum means by contributing to engagements from framing through to landing the insight.

On the AI dimension, the work I have built in production goes well past what most practitioners describe as AI use:

- Agentic report generation: designed and deployed a company-wide Claude workflow that auto-generates structured client progress reports from analytics outputs, rolled out across the full analyst team (~25-30 client accounts) and saving approximately 12-15 hours per week across the business.
- Multi-agent QA pipeline: built a 5-agent + orchestrator validation system using Claude that evaluates client datasets prior to delivery, applying systematic AI-output scrutiny at each step rather than accepting model outputs at face value.
- AI hackathon, 1st place: built an LLM-powered call-transcript analyser (scoring call quality, sentiment, and expectation-setting) that placed first in an internal company AI hackathon and was subsequently adopted into the company's operational workflow.
- ML at commercial scale: led the company's first ML spend-categorisation project, a one-vs-all binary classifier with feature engineering, class-imbalance handling, and cross-validation, over approximately A\$12B of client spend across 5 years, cutting the categorisation cycle from 1-1.5 months to a single day's model run.

I want to be straightforward on two points. My domain background is procurement and operational analytics rather than financial services, but the analytical patterns are directly transferable: anomaly detection, cost-leakage analysis, hypothesis-driven investigation, enterprise transaction data at scale, and statistical and ML modelling all map to the problems Quantum solves in insurance and banking. I learn domains fast and am genuinely motivated to develop financial services expertise here. Second, my primary languages are Python and SQL. I do not have production R experience, but I am actively building fluency, and my statistical foundations (Monash Master of Data Science: Statistics I/II, Applied

Forecasting, High Dimensional Analysis) mean the ramp is a matter of syntax rather than concept.

What draws me specifically to Quantum is the intersection of genuine consulting rigour with an AI-first delivery model. Most analytics roles sit in-house in a single domain. Quantum offers a variety of client problems and domains (insurance, banking, super, wealth) combined with an embedded partner model and the explicit expectation that analysts use AI with judgement rather than as a shortcut. That is already how I work, and I want to develop that capability in a team that treats it as a first-class practice rather than an add-on.

I would welcome the opportunity to discuss how my background maps to the role. I am available for a conversation at your convenience.

Sincerely,

Dhruv Nirmal
