Amanda Lee, At Your School (AYS, Inc.), Indianapolis (Remote)

Dear Amanda,

I'm writing about the Data Analyst role at AYS. Most of my day to day is exactly this job: pulling data from multiple systems, cleaning it up, building dashboards, and explaining what it means to people who don't work with data all day. I like the pace of a role where you own reporting end to end rather than a narrow slice of it, and where the output has to hold up in front of non-technical decision-makers, which is how I've worked for the past two years.

The clearest example is a multi-venue restaurant client I supported. I built their product catalogue from scratch, cleaned and organised roughly 3,000 to 3,500 items, then built a dashboard tracking price movement and cost leakage by product, venue and supplier. Presenting that to their CFO and category managers helped them find close to 30% savings, around A\$2M over a year, in their largest spend category. I also maintain data quality and accuracy across a much larger account spanning 5 regions and 13 sub-regions, with automated checks that flag issues before they ever reach a report, while keeping sensitive financial and vendor data confidential throughout.

On the technical side, I'm comfortable across SQL, Excel, Python and both Tableau and Power BI, and I've built 16+ dashboards currently used by procurement and finance teams for KPI tracking and cost decisions. I also built an internal reporting workflow that's saved my team roughly 12 to 15 hours a week, which is the kind of process improvement I'd look to bring to AYS. Since I work remotely already, I keep clear written documentation and give proactive updates so people aren't left waiting on me to explain what changed or why.

What draws me to AYS specifically is the mission behind the data: every dashboard or report I'd build here is ultimately in service of a child or family getting a better experience with the school. I haven't worked in education before, but the core of the job (organising messy data, catching accuracy issues early, and turning numbers into something a non-technical team can act on) is exactly what I do now, just applied to a sector I'd be glad to learn. I'd welcome the chance to talk through how I could support AYS's reporting and decision-making.

Thank you for considering my application. I'm happy to speak at a time that works for you.

Best regards,

Dhruv Nirmal
