PROFESSIONAL SUMMARY

I'm a data analyst who turns messy, multi-source data into clean reports and dashboards that non-technical stakeholders actually use to make decisions. I run the full loop: pulling and cleaning data from multiple systems, checking it for accuracy, building dashboards in Tableau and Power BI, and explaining what the numbers mean in plain language for program and leadership teams. On one account, that kind of analysis helped a client find around **A\$2M** in savings. Working remotely, I keep clear written documentation and proactive updates so distributed teams stay aligned, and I'd bring that same discipline to tracking program performance and supporting decisions across AYS.

KEY SKILLS

Analysis & BI: SQL, Excel, Power BI, Tableau, exploratory data analysis, dashboards, KPI and BAU reporting, ad hoc analysis, requirements gathering, data storytelling

Data & Programming: Python (pandas, numpy), data cleaning, data validation and quality, database integrity checks, data modelling, ETL, documentation, Azure

Stakeholder: stakeholder communication, presenting to non-technical audiences, cross-functional collaboration, confidentiality with sensitive data

Modelling (supporting): classification, time-series forecasting, anomaly detection, scikit-learn

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

A data and analytics consultancy. I own analysis and reporting for enterprise clients end to end and present findings to non-technical stakeholders. Selected engagements:

Pricing and cost analysis, multi-venue restaurant group (AU/NZ)

- Built a product catalogue of roughly 3,000 to 3,500 items, cleaned and organised the underlying data, then built a dashboard tracking price movement and cost leakage by product, venue and supplier using SQL and Python (pandas, numpy).
- Presented findings to the CFO and category managers; helped them identify close to 30% savings, roughly **A\$2M** over a year, in their largest spend category.

Data quality and reporting, largest client account (multi-region)

- Coordinate data across 5 regions and 13 sub-regions, built automated validation that flags discrepancies before they reach a report, and maintain confidentiality of sensitive financial and vendor data throughout.
- Built and maintained 16+ Tableau dashboards for procurement and finance teams, giving stakeholders self-service visibility into KPIs and cost-optimisation opportunities, and cutting repeat manual reporting requests.

Reporting automation, internal (my own firm)

- Built a workflow that auto-generates client reports from our analytics outputs with a QA check; adopted across the analyst team, saving roughly 12 to 15 hours a week and standardising delivery.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Cleaned and analysed government procurement data, then delivered findings through a Power BI solution adopted by senior Department of Transport stakeholders, improving anomaly-detection accuracy by about 20%.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Bachelor of Engineering, Thapar University | May 2017 to May 2021
