Hiring Team

Financial Services Consulting Practice

Quantium, Australia

Dear Hiring Team,

I'm applying for the Data Scientist (Consulting) role in Quantium's Financial Services practice. A role that pairs genuine consulting with an AI-first delivery model, and expects data scientists to use AI with judgement rather than at face value, is a rare match for how I already work.

At Purchasing Index Data Analytics (part of Comprara Group), a data and analytics consulting firm, I run five enterprise client accounts on my own, taking each from a loosely defined problem through to a recommendation the client can act on. On one, a restaurant chain across Australia and New Zealand, I ran the relationship directly with the CFO, Chief Procurement Officer and category managers, and built pricing and supplier dashboards that turned a vague concern about overspending into roughly A\$2M a year in savings in their largest category.

I also build with AI in production rather than just experiment with it: a company-wide Claude workflow that generates client progress reports and saves the team 12 to 15 hours a week, and a multi-agent QA system that scrutinises model output before it reaches a client. On the data science side, I led our first ML spend-categorisation project, classifying roughly A\$12B of client spend and cutting a manual cycle from over a month to a single day's model run.

Two things I'll be straightforward about. My domain has been procurement rather than financial services, but the methods carry across directly: anomaly and cost-leakage detection, hypothesis-driven investigation, and statistical and ML modelling on enterprise transaction data at scale. And while my main languages are Python and SQL rather than R, my statistics foundation (Monash Master of Data Science) makes that ramp a matter of syntax, not concept. I learn domains quickly and am genuinely motivated to do it here.

I'd welcome the chance to talk about how I could contribute.

Sincerely,

Dhruv Nirmal
