PROFESSIONAL SUMMARY

I'm a data analyst who turns business questions into Power BI and Tableau reporting that stakeholders actually use to make decisions, not just read. At PI Data Analytics I independently manage BI delivery and stakeholder relationships across five enterprise client accounts in an Azure-hosted data warehouse environment: gathering requirements from senior stakeholders, writing the SQL and Python behind the numbers, and shipping the dashboards, including 16+ production Tableau builds. On one account I structured the pricing analysis that helped the client identify roughly A\$2M in savings in a major spend category. I put as much care into standardising, validating and documenting the data behind a report as into the report itself, I've delivered Power BI adopted by senior government stakeholders, and I'm comfortable working across Azure and Databricks. That mix of requirements gathering, BI delivery and tidy pipelines behind it is why UniSuper's Data Analyst role feels like a natural next step.

KEY SKILLS

Analytics & BI: Advanced SQL, Power BI, Tableau, Microsoft Excel, Data Storytelling, KPI Dashboards, BAU and Ad Hoc Reporting, Requirements Gathering

Data & Programming: Python, Data Modelling, Data Cleaning, ETL Pipelines, Data Validation and Quality Checks, KNIME

Cloud & Platforms: Azure, Databricks, PySpark, AWS, Docker

Stakeholder & Delivery: Stakeholder Management, Client Relationship Ownership, Documentation and Process Standardisation, Data Literacy Enablement, Cross-functional Collaboration

AI/Automation (exposure): LLM-assisted workflow automation (Claude, ChatGPT)

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

Client-facing analytics consultancy; independently manage BI delivery, stakeholder relationships and reporting for enterprise clients across Australia and New Zealand in an Azure-hosted data warehouse environment.

- Independently manage BI delivery and stakeholder relationships across five enterprise client accounts, translating business needs into SQL and Python-driven reporting solutions and presenting outputs directly to senior executives.
- Owned a restaurant-chain client account end to end as sole analyst: structured a product catalog of roughly 3,000 to 3,500 items, built a pricing-decision dashboard tracking price movements across categories and suppliers, and ran bi-weekly stakeholder meetings with the CFO, Chief Procurement Officer, category managers and general managers, helping the client identify roughly A\$2M in savings in one major spend category.
- Own the end-to-end data pipeline for the company's largest client account, spanning 5 global regions, 13 sub-regions and multiple source datasets: coordinate directly with the regional teams and data owners who supply the data, standardised file-submission and naming conventions across every region, built automated data validation that flags row and format discrepancies and logs issues for review, and documented the process so it runs consistently.

- Designed, built and maintained 16+ Tableau dashboards for procurement and finance teams, giving stakeholders self-service visibility into supplier spend, category-level KPIs and cost-optimisation opportunities.
- Promoted self-service and data literacy: documented metrics and definitions so stakeholders could explore dashboards without analyst help, and rolled out a standardised reporting workflow adopted across the analyst team so colleagues could produce consistent client reporting themselves.
- Built and maintained 20+ automated SQL and Python reporting pipelines processing millions of transactions monthly, meeting BAU reporting SLAs and cutting manual reporting effort roughly 40%.
- Performed anomaly detection on procurement datasets to surface cost-leakage patterns, contributing to roughly 15% in cost savings across client accounts.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built and delivered a Power BI analytics solution that was adopted by senior Department of Transport stakeholders; presented architecture and outcomes to cross-functional teams.
- Built a distributed anomaly-detection pipeline (Databricks, PySpark) on government procurement data, improving detection accuracy roughly 20%.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave datasets using statistical models and filtering techniques, then compiled findings into a 70-page technical report (MATLAB, Excel) for research stakeholders.

PROJECTS

Restaurant Chain Pricing and Supplier Analytics (Python, SQL, Tableau)

- Built an end-to-end pricing-decision platform for a restaurant chain operating across Australia and New Zealand: structured a 3,000 to 3,500 product catalog, developed a dashboard tracking price movements and cost leakage across products, venues and suppliers, and ran the stakeholder relationship directly. Identified roughly A\$2M in savings in one spend category.

Global Multi-Region Spend Analytics Platform (SQL, Python, Azure, BI dashboards)

- Own the end-to-end pipeline for the company's largest client account (5 regions, 13 sub-regions, roughly 6 million invoice rows). Replaced a manual upload process with automated email-based ingestion, standardised naming and submission conventions across all regions, and built automated validation that catches and logs discrepancies before they reach a dashboard, cutting weekly processing time from 4 to 5 hours down to roughly 75 minutes.

Power BI Analytics Platform, Dept of Transport (Power BI, Databricks, PySpark)

- Designed and deployed a Power BI analytics solution for Victorian government procurement data; presented findings to senior Department of Transport stakeholders and cross-functional teams, where it was adopted for ongoing use.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Statistics I and II, Machine Learning, Applied Forecasting, Communicating with Data, High Dimensional Analysis

Bachelor of Engineering, Thapar University | May 2017 to May 2021

Mathematics I/II/III, Statistics, Analog and Digital Electronics
