Hiring Team, Sporty Group

Dear Hiring Team,

I am applying for the Data Analyst role at Sporty Group. I spend my days turning large, sometimes messy datasets into dashboards and KPIs that business teams actually use to make decisions, which is close to the shape of this role, and Sporty Group's remote-first setup fits how I already work: independently, with clear written updates so distributed teammates stay aligned without needing to be in the same room.

In my current role at a client-facing data analytics consultancy, I own a large procurement dataset for a restaurant chain across Australia and New Zealand end to end, from building the underlying product catalog to the pricing dashboards that track how costs move across suppliers and categories. That dashboard work helped the client identify roughly A\$2M in savings on one of their largest categories over a year, work I ran solo, presenting the findings directly to the client's Chief Procurement Officer and category managers in regular stakeholder meetings.

Underneath the dashboards sits the infrastructure that keeps them trustworthy. I have built and maintain over 20 automated SQL and Python pipelines processing millions of transactions a month, and I designed the automated validation that checks row counts, data types and column consistency on our largest client's data before anything reaches a stakeholder. I also enjoy pushing into machine learning when it earns its place: I recently led a one-vs-all logistic regression classifier that categorised a five-year, roughly A\$12B client spend dataset, cutting a manual categorisation cycle from about six weeks to a single day, and built a Prophet forecasting model that predicts a client's inventory needs within a 12.5-14% error margin.

Sporty Group's scale, mining large volumes of data for decisions that reach millions of users, is the kind of environment I want to work in, and the remote-first structure suits my planned move to India over the coming months without any loss of continuity. My background is procurement and enterprise data rather than sports or gaming, and the discipline that carries across either way is the same: validating a dataset before it reaches a stakeholder, and defining the right KPI for a business question. I would treat learning Sporty Group's sports and gaming context as the fast part of ramping up, not the hard part.

I would welcome the chance to talk through how this experience maps onto Sporty Group's reporting and analytics needs. Thank you for your time and consideration.

Sincerely,

Dhruv Nirmal
