Hiring Team, micro1 (Data Analyst, Contractor, Remote)

Dear Hiring Team,

I'm applying for the Data Analyst contract at micro1. What drew me to this posting is how well it matches how I already work day to day: pulling and joining data myself, writing my own SQL and Python rather than routing requests through someone else, and turning that analysis into a clear, documented recommendation on my own timeline. I've worked fully independently on a remote-friendly, distributed team for the past two years, so operating async with meticulous written documentation is already my default, not an adjustment.

At PI Data Analytics, a data and analytics consulting firm, I own analytics engagements for enterprise clients end to end. For a multi-venue restaurant group across Australia and New Zealand, I was the sole analyst on the account: I tracked price movement and cost leakage down to the product, venue, and supplier level in SQL and Python, then presented the findings directly to the Chief Procurement Officer and category managers. That work surfaced roughly A\$2M in identifiable savings in their largest spend category over a year, the kind of result that only shows up when you dig past summary numbers into the detail and communicate it in language a non-technical stakeholder can act on.

The part of my background I think maps most directly to micro1's work is that I don't just use AI tools, I build and evaluate them. I've built agentic LLM workflows (Claude, ChatGPT) that our team runs in production, including a multi-agent QA process that validates client datasets before delivery and a call-transcript quality and sentiment analyzer that took first place in an internal AI hackathon and was later adopted into the team's live workflow. I also led a one-vs-all classification pipeline (scikit-learn, TF-IDF, engineered features, cross-validation, explicit class-imbalance handling) that replaced a six-week manual categorisation process on a roughly A\$12B spend dataset with a single model run, real, hands-on evidence of doing careful statistical work at scale rather than describing it.

What appeals to me about micro1 specifically is the mission itself: turning genuine subject-matter expertise into the training data and evaluations that shape how AI systems learn and reason. That's exactly the kind of careful, well-documented, judgment-driven analytical work I already do, and having built and evaluated AI workflows from the inside gives me a real sense of what separates a useful evaluation from a shallow one. A fully remote, contract-based setup also fits how I already operate, independently, with clear written updates keeping everyone aligned.

I'd welcome the opportunity to bring this experience to micro1. Thank you for your consideration.

Sincerely,

Dhruv Nirmal
