PROFESSIONAL SUMMARY

I'm an analyst who works independently with large, imperfect datasets, writing my own SQL and Python end to end rather than waiting on a hand-off, and I bring genuine hands-on experience building and evaluating LLM and agentic AI workflows, not just studying them from the outside. At PI Data Analytics, I own analytics engagements for enterprise clients solo, from data extraction through statistical analysis to a documented recommendation a non-technical stakeholder can act on, including work that surfaced roughly A\$2M in savings for one client. Working remotely, I keep clear written documentation and proactive async updates so distributed teams stay aligned. I'd like to bring that independence, SQL/Python depth, and real AI-evaluation experience to micro1's Data Analyst contract, contributing the kind of rigorous, well-documented analysis that good training data and model evaluations depend on.

KEY SKILLS

Analytics & SQL: SQL (SQL Server/T-SQL, Snowflake: complex joins, window functions, CTEs, procedural batch logic), Python (pandas, numpy, scikit-learn) for analysis, automation, data cleaning, statistical modelling

AI & Agentic Workflows: LLM workflows (Claude, ChatGPT), multi-agent orchestration, prompt engineering, AI-output evaluation and QA

Data Engineering & Cloud: ETL pipeline design, multi-source data integration, Azure, AWS (S3, Athena, Glue), Snowflake, Databricks/PySpark

BI & Communication: Tableau, Power BI, data storytelling, client-facing reporting, meticulous documentation for remote/async teams

EXPERIENCE

Data Analyst, PI Data Analytics (Comprara Group) | Jun 2024 to Present | Melbourne (remote-capable)

Independently manage analytics engagements across 5 enterprise clients (AU/NZ) for this consulting firm, owning each account's SQL/Python analysis, data integrity, and stakeholder reporting end to end.

- Surfaced roughly A\$2M (about 30%) in savings in a multi-venue restaurant client's largest spend category by tracking price movement and cost leakage to the product, venue, and supplier level in SQL/Python, then reporting findings clearly to the Chief Procurement Officer and category managers.
- Built a one-vs-all classification pipeline (scikit-learn, TF-IDF plus engineered spend and line-count features, cross-validation, class-imbalance handling) that turned a roughly six-week manual categorisation cycle on a A\$12B, five-year spend dataset into a single model run.
- Own data integrity and validation for the firm's largest client account, standardising intake across 13 sub-regions and building automated checks (row counts, data-type and column consistency) that flag discrepancies before they reach anyone, coordinating entirely with remote regional stakeholders.
- Build and evaluate agentic AI/LLM workflows (Claude, ChatGPT), including a multi-agent QA process that validates client datasets before delivery and a call-transcript quality/sentiment analyzer, the kind of AI-output evaluation work directly relevant to training and assessing AI systems.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI) | Aug 2023 to Nov 2023 | Melbourne

- Built a distributed anomaly-detection pipeline (Databricks, PySpark), improving detection accuracy by roughly 20%; deployed a Power BI solution adopted by senior Department of Transport stakeholders.

PROJECTS

- **LLM call-transcript quality analyzer (Python, agent orchestration, sentiment analysis):** built for an internal AI hackathon (1st place); scores call quality, expectations-met, and tone, then orchestrates stakeholder notifications; later adopted into the team's live workflow.
- **Facit (myfacit.com), profitability SaaS for cafes (personal, Python, AI-driven automation):** independently built and documented; unifies POS, wages, and supplier data into a weekly profitability view; live with a design-partner cafe.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Bachelor of Engineering, Thapar University | May 2017 to May 2021
