PROFESSIONAL SUMMARY

Data Analyst with 2+ years turning transaction and product data into dashboards, reports and recommendations that stakeholders act on. Owns the full cycle from querying and cleaning data in SQL through to dashboards in Tableau and Power BI, then applies statistical methods to explain what the numbers mean for a decision; on one account this analysis helped a client identify roughly A\$2M in savings. Also designed and owns MyFacit, a live decision-support product for cafes, defining its metrics and data tracking end to end, which is the product-analytics discipline this role calls for. Holds a Master of Data Science with a strong statistics foundation and works effectively in remote, distributed teams.

KEY SKILLS

Analysis & BI: SQL, dashboard design and maintenance, Tableau, Power BI, data storytelling, KPI reporting, ad hoc analysis, requirements gathering

Statistics & Modelling: descriptive and inferential statistics, hypothesis testing, classification modelling (scikit-learn), forecasting (Prophet), anomaly detection, data modelling

Data & Programming: Python (pandas, numpy), ETL pipeline design, data cleaning and validation, Snowflake, AWS

Stakeholder & Delivery: stakeholder communication, presenting to senior stakeholders, cross-functional collaboration with product and engineering, documentation for distributed teams

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia (remote/hybrid delivery)

A data and analytics consultancy analysing supplier and transaction data for enterprise clients across Australia and New Zealand.

- Ran a pricing and cost analysis for a multi venue restaurant group: structured a product catalogue of around 3,000 items in SQL, segmented spend by product, venue and supplier to isolate where cost was leaking, and built a dashboard in Tableau to track it. Presented findings directly to the Chief Procurement Officer and category managers, helping the client identify close to 30% savings, roughly A\$2M, in their largest spend category over a year.
- Built and maintained 16+ Tableau dashboards for procurement and finance teams, giving stakeholders ongoing visibility into spend trends, KPIs and cost optimisation opportunities.
- Queried and validated large transaction datasets in SQL across 5 enterprise clients, defining data-tracking requirements with client teams and building automated checks that catch discrepancies before they reach a report.
- Applied statistical analysis and a classification model (TF-IDF features, logistic regression) to a large spend dataset, cutting a manual categorisation cycle that took about a month down to a single day's model run.
- Built and maintained 20+ automated pipelines that pull and clean transaction data from multiple client systems monthly, keeping downstream reporting and analysis current and reliable.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a distributed anomaly detection pipeline on government procurement data using Databricks and PySpark, and delivered the findings through a Power BI solution adopted by senior Department of Transport stakeholders; detection accuracy improved by about 20%.

PROJECTS

MyFacit: a multi-tenant profitability product I built and own, for independent cafes

- Designed and shipped the product end to end: defined the metrics that matter (revenue, wage and food cost, gross margin), decided what the product needed to capture, and built the data model that unifies point-of-sale, wages and supplier invoices into one weekly view.
- Turned that data into decisions the owner acts on: a weekly pulse with revenue forecasting, menu engineering (which items actually carry the margin) and supplier price-creep detection, surfacing one recommended action each week rather than a one-off report.
- In active use with a design-partner cafe (Neighbours Cafe, St Kilda), iterating on the product from real usage and operating data through weekly reviews. My closest analog to owning the metrics and data tracking for a live product.

Cloud Data Platform with Terraform (AWS, Snowflake)

- Provisioned a cloud data warehouse as infrastructure as code (S3, IAM, EC2) and built an automated ingestion pipeline from external APIs into Snowflake, with a Power BI layer on top. Personal build demonstrating cloud based data warehousing end to end.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Coursework: Statistics I/II, Machine Learning, Communicating with Data, Applied Forecasting, High Dimensional Analysis.

Bachelor of Engineering, Thapar University | May 2017 to May 2021
