Hiring Team, Growe

Dear Hiring Team,

I am writing to apply for the Middle Data Analyst role at Growe. Over the past two years I have specialised in end-to-end analytics for enterprise clients: translating a business question into a clearly defined metric, building the analysis in SQL and Tableau, and presenting actionable recommendations to senior stakeholders. This is precisely the ownership the role describes, from requirements gathering through to presenting results, and it is the work I do best.

The clearest example is a cost and pricing analysis engagement I led for a multi-venue client group across Australia and New Zealand. The client suspected they were overspending but had no dataset to show where. I owned the engagement independently, built a catalogue of roughly 3,000 items to make the data analysable, and developed a Tableau dashboard that traced cost movement and leakage down to individual products, venues and categories. Presenting findings fortnightly to the client's senior leadership, the analysis identified close to A\$2M in savings in their largest category over the year.

Data accuracy is central to how I work. On my firm's largest client account, roughly six million transactional rows are refreshed weekly across five regions and thirteen sub-regions. I built the automated validation that checks row counts, data types and column consistency before figures reach a report, and standardised how each region submits data so discrepancies are caught early rather than discovered downstream. This is the same discipline I would bring to keeping Growe's reusable datasets and dashboards reliable as the analytics function scales.

At the core of this role is defining a business metric precisely, identifying what is driving it, and communicating the answer so a non-technical stakeholder can act on it. That is the discipline I have applied for two years, and it transfers directly to revenue, customer and retention analytics. Having worked remotely with clients across different locations, I am also well suited to a fully remote, distributed team. I would welcome the opportunity to discuss how my experience applies to Growe's data.

Thank you for your consideration. I would be glad to discuss the role further at your convenience.

Regards,

Dhruv Nirmal
