Hiring Manager, Johnson Fitness & Wellness (Johnson Health Tech)

Dear Hiring Manager,

I'm writing to apply for the Ecommerce Data & Analytics Engineer role at Johnson Fitness & Wellness. The mix the role asks for, someone who can build and maintain the pipelines that bring data together from many systems and also turn that data into reporting people actually use, is exactly how I work day to day, and doing that for a company whose fitness brands reach customers across more than 60 countries is a genuinely appealing place to put it to use.

In my current role as a data and analytics engineer at Purchasing Index Data Analytics, I own the end-to-end pipeline for the firm's largest client: close to six million transaction rows drawn from five global regions and thirteen sub-regions, previously assembled through a manual, error-prone upload process. I replaced that with automated ingestion, Microsoft Graph API into SQL Server, and built the validation checks that catch bad data before it reaches reporting, standardising how every region feeds into one consistent pipeline. That is the same core problem this role solves: many different systems feeding into one reliable, well-modelled view of the business.

On top of the pipeline work, I build the reporting layer too. I have developed and maintain 16+ Tableau dashboards that procurement and finance stakeholders use to track spend and find savings, and I built a Prophet-based forecasting model that gives another client a three-month forward view of inventory needs. Earlier, during a data-engineering internship, I delivered a Power BI solution that was adopted by senior government stakeholders. Outside work, I designed and run MyFacit, a product I built that unifies point-of-sale transactions, payroll and supplier invoices for independent cafes into one weekly profitability view, a live example of taking messy, multi-source retail data and turning it into a decision a non-technical owner can act on that Monday.

What draws me to Johnson Fitness & Wellness specifically is the scale of the integration problem: many different systems, including retail showrooms, all need to tell one consistent story about the business, and that is precisely the kind of multi-source, high-volume pipeline and reporting work I already do. My day-to-day experience sits in procurement and supply-chain analytics rather than ecommerce, but the discipline underneath it, integrating messy data into models the business can trust and reporting on it clearly, is the same discipline this role needs, and I pick up new domains quickly.

I'd welcome the chance to talk through how my pipeline and reporting experience could support this role. You can reach me at dhruvnirmal2111@gmail.com or +61 406 259 619.

Yours sincerely,

Dhruv Nirmal
