PROFESSIONAL SUMMARY

I work as an analyst at a procurement analytics consultancy, so commercial and procurement work is my day-to-day, not a side interest. I take messy commercial data, sales, costs, margins, supplier pricing and tenders, and turn it into a clear case for what to negotiate, price, or stock next. As the sole analyst on a pricing and margin engagement for an AU/NZ restaurant chain, reporting directly to the Chief Procurement Officer and category managers, I helped surface the price movement and cost leakage that captured around 30% (~A\$2M) of savings in their largest category, and I evaluated their supplier tenders across chicken and spirits. I have also structured a client's roughly A\$12B annual spend into categories for supplier evaluation, and forecast a fresh-produce client's inventory three months ahead while evaluating their fruit and packaging tenders. Alongside this I built Facit, a profitability SaaS for independent cafes, so I would bring the same procurement discipline to BOUNCE's F&B margins, supplier performance and stock decisions across the venue network.

KEY SKILLS

Commercial & Procurement: Supplier Tender / RFP Evaluation, Supplier Performance & Pricing Analysis, Margin / COGS / GP%, Category Cost Analysis, Supplier Negotiation Support, Business Cases

Inventory & Stock Planning: Demand Forecasting, Bill of Materials, Par-Level Reorder Alerts

BI & Reporting: Advanced Excel, Power BI, Tableau, Dashboard Design, KPI Reporting

Data & Modelling: Python, SQL, Time-Series Forecasting (Prophet), ML Classification

Stakeholder & Delivery: Client-Facing Delivery, Senior Stakeholder Management, Process Improvement

EXPERIENCE

Commercial Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

Sole analyst on multiple enterprise client accounts at a **procurement analytics consultancy**, where supplier, spend and pricing work is the firm's core business. I deliver commercial decision support directly to CPOs and category managers across Australia and New Zealand.

- Owned end-to-end a pricing and margin engagement for an AU/NZ restaurant chain: built a product catalog (~3,000 products), a pricing-decision dashboard tracking category-level price movement to support supplier deal negotiations, and a supplier dashboard flagging cheaper substitute items; identified around 30% (~A\$2M) savings in the client's largest category over one year, presenting directly to the Chief Procurement Officer and category managers in bi-weekly and monthly reviews.
- Evaluated supplier tenders across food, drink and packaging categories: for the restaurant chain, compared supplier bids for **chicken** and **spirits** supply; for a fresh-produce client, evaluated **fruit** and **packaging** tenders, giving each client a like-for-like basis to award the right supplier.
- Structured roughly A\$12B of client spend into categories with an ML pipeline (TF-IDF, Logistic Regression, one-vs-all classifier) using a Pareto approach, manual review for the high-value head and the model for the long tail, giving category managers a clean base for supplier evaluation and cutting categorisation time from 1 to 1.5 months to a single day.

- Supported inventory forecasting and stock planning: built a Prophet time-series model forecasting raw-material and chemical inventory 3 months ahead (12.5 to 14% error margin) for a fresh-produce client, a bill of materials mapping finished products to their inputs, and automated daily and weekly inventory reports for two medical clients, with par-level reorder alerts on the daily report flagging stock before a stockout.
- Built 16+ Tableau dashboards for procurement and finance teams, giving stakeholders live visibility into supplier performance, spend, and cost-optimisation opportunities.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a Power BI solution on government procurement data, adopted by senior Department of Transport stakeholders, and engineered an anomaly-detection pipeline (Databricks, PySpark), improving detection accuracy by about 20%.

PROJECTS

Facit, Café Profitability SaaS (Python, AI) -- personal build

- Built Facit, a multi-tenant SaaS for independent cafes that unifies POS transactions, staff wages and 14 suppliers' invoices into one weekly profitability read: revenue, wage cost %, food cost %, gross margin, plus menu engineering and **supplier price-creep detection** that flags rising input costs before they hit the P&L.
- Live with Neighbours Cafe, St Kilda as the design partner (~20 staff, TapTouch POS and QuickBooks), built around messy real-world data and a non-technical operator, with weekly sessions to refine it in day-to-day use. It does for cafes exactly what this role does for BOUNCE: turn F&B cost and supplier data into a margin decision the operator can act on.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Bachelor of Engineering, Thapar University | May 2017 to May 2021
