Hiring Manager, BOUNCE, Melbourne VIC

Dear Hiring Manager,

I am writing to apply for the Commercial & Procurement Analyst role at BOUNCE. I already do this work every day: I am an analyst at a procurement analytics consultancy, where supplier, spend and pricing analysis is the core of the business rather than a side project, and my clients are enterprise procurement and finance teams. What draws me to BOUNCE is the shape of the role, one that sits in Finance but earns its keep out at the venues and with suppliers, turning a messy commercial question into a case someone can act on rather than a report that sits on a shelf. Reporting into a Commercial Manager across a growing network of venues is exactly the kind of setting where a steady analyst who follows through matters most.

The clearest proof of that is a pricing and margin engagement I ran end to end as the sole analyst for a restaurant chain across Australia and New Zealand. I built a structured product catalog of around 3,000 items, a pricing dashboard tracking category-level price movement so the procurement team could negotiate better supplier deals, and a second dashboard flagging cheaper substitute products. I presented the findings directly to the Chief Procurement Officer and the food category manager in regular reviews, and over a year that work helped the client capture around 30 percent, roughly A\$2 million, of savings in their largest category. For the same client I also evaluated supplier tenders for chicken and spirits, comparing bids on a like-for-like basis so the team could award the right supplier. It is the same rhythm BOUNCE needs across F&B: margin, supplier and tender analysis that leads somewhere, not analysis for its own sake.

I bring real range alongside that. I built a spend-categorisation model that structured roughly A\$12 billion of a client's annual spend into categories, giving their team a much cleaner base for supplier evaluation. For a fresh-produce client I built a Prophet forecasting model that projects raw-material inventory three months ahead within a 12 to 14 percent error margin, a bill of materials, and automated stock reports with par-level reorder alerts, and I evaluated their fruit and packaging tenders, all of it aimed at the same question BOUNCE is asking: what should we be ordering, from whom, and when. Alongside my day job I also built Facit, a profitability tool I designed for independent cafes that unifies POS, wages and supplier invoices into a weekly read on food cost percentage, gross margin, menu engineering and supplier price-creep, live with a real café as the design partner. So I have thought hard about F&B margins from both the analyst side and the operator side.

BOUNCE sits at an interesting intersection: an entertainment business where food and beverage is becoming a real commercial lever across the network, not an afterthought. That is precisely the kind of problem I like, messy, multi-site, and genuinely commercial, where curiosity and a bit of relationship building with suppliers and internal teams turn into a measurable improvement in margin. I would welcome the chance to talk through how I could contribute to that from day one. You can reach me at dhruvnirmal2111@gmail.com or +61 406 259 619.

Yours sincerely,

Dhruv Nirmal
