Professional Summary

Data Engineer and analytics practitioner with 2+ years of client-facing delivery experience building automated data pipelines, AI-enabled reporting workflows, and BI dashboards for enterprise clients. At PI Data Analytics I designed and deployed 20+ production ETL pipelines and built agentic AI workflows (multi-agent orchestration with Claude) that eliminated manual analytical report assembly — directly mirroring Qualitas's focus on AI-enabled analytical outputs. Proficient in Python, SQL, Tableau, Power BI, and version-controlled cloud infrastructure; experienced translating senior briefs into well-scoped, deadline-driven deliverables across multiple concurrent workstreams.

Key Skills

Programming & Analytics: Python, SQL, data modelling, feature engineering, ETL pipeline design, KNIME

AI & Machine Learning: LLM workflows (Claude, ChatGPT), multi-agent / agentic AI orchestration, scikit-learn, anomaly detection, NLP/sentiment analysis, forecasting models

BI & Visualisation: Tableau (16+ production dashboards), Power BI, data storytelling, KPI analytics, investor/stakeholder reporting

Cloud & Infrastructure: Azure, AWS (S3, IAM, EC2), Snowflake, Databricks, Docker, Terraform (IaC), version control (Git)

Workflow Automation: Automated reporting pipelines, presentation generation, data QA automation, batch scheduling

Experience

Data Engineer, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 – Present | Melbourne, Australia

- Built and maintained 20+ automated ETL data pipelines processing millions of procurement transactions monthly across 5 enterprise clients, reducing manual reporting effort ~40% and improving turnaround ~50% (Python, SQL, Azure-hosted servers).
- Built an agentic AI workflow using Claude to auto-generate structured client progress reports from analytics outputs, eliminating manual report assembly and delivering consistent, investor/client-facing analytical documents.
- Developed a multi-agent data QA validation workflow (5 agents + orchestrator) to validate client datasets prior to delivery, catching data issues before they reached stakeholders and raising output consistency.
- Developed 16+ Tableau dashboards for procurement and finance teams to monitor supplier spend, track KPIs, and surface cost-optimisation opportunities; communicated analytical findings directly to senior executives.
- Built an automated presentation-generation workflow using Claude to convert analytics outputs into structured PowerPoint decks, removing manual deck-building from the client delivery process.
- Performed anomaly detection on procurement datasets, identifying cost-leakage patterns that contributed to ~15% client savings — hypothesis-driven investigation translating ambiguous data signals into actionable insight.
- Built a binary classification model (TF-IDF + Logistic Regression) to categorise transaction descriptions, cutting manual categorisation effort ~40% and improving data standardisation for downstream analytics.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 – Nov 2023 | Melbourne, Australia

- Built a distributed anomaly-detection pipeline in Databricks (PySpark) on government procurement data, improving detection accuracy ~20%.
- Deployed a Power BI analytics solution adopted by senior Department of Transport stakeholders; presented system architecture and analytical outcomes to cross-functional teams.

Research Data Analyst, TBRL — Defence Research and Development Organisation (DRDO)

Jan 2021 – Jul 2021

- Analysed blast-wave datasets using statistical and signal-processing models; compiled findings into a structured 70-page report (MATLAB, Excel), improving design efficiency ~10%.

Projects

Multi-Agent Data QA Validation Workflow (Claude, Python, multi-agent orchestration)

- Designed a 5-agent + orchestrator pipeline to autonomously validate client datasets across completeness, consistency, and schema checks prior to every delivery cycle.
- Reduced manual QA overhead and standardised pre-delivery data quality; directly applicable to automated fund/financial reporting workflows requiring audit-grade output consistency.

Agentic Client-Report Generation (Claude, Python, PowerPoint automation)

- Built an end-to-end agentic workflow that ingests analytics outputs and auto-generates structured, client-facing progress reports and PowerPoint presentations — no manual assembly required.
- Demonstrated practical AI application to accelerate analytical reporting: directly maps to Qualitas's goal of AI-enabled investor-facing outputs.

Cloud Data Platform with Terraform (AWS, Terraform, Snowflake, Power BI)

- Provisioned full cloud infrastructure as code (S3, IAM, EC2, networking) with modular Terraform patterns for reproducible dev/staging/prod environments.
- Automated data ingestion from external APIs to Snowflake; end-to-end ingestion-to-BI platform with Power BI reporting layer — demonstrating version-controlled, production-grade pipeline design.

Education

Master of Data Science, Monash University | Feb 2022 – Dec 2023

Statistics I/II, Machine Learning, Applied Forecasting, High Dimensional Analysis, Communicating with Data, Web App Development, Supply Chain Management

Bachelor of Engineering, Thapar University | May 2017 – May 2021
