PROFESSIONAL SUMMARY

Analytics professional with 2+ years of client-facing consulting experience framing ambiguous commercial problems, building statistical and ML models, and delivering quantified results to CFOs, CPOs, and senior executives across enterprise clients in Australia and New Zealand. Proficient in Python and SQL with a daily, production-grade track record of building agentic AI systems using Claude and ChatGPT - including a company-wide agentic report generator saving ~12-15 hours per week across ~25-30 client accounts, a 1st-place AI hackathon build adopted into company workflow, and a multi-agent QA pipeline - moving well past experimentation into building. Delivered measurable commercial impact: ~**A\$2M/year** in category savings for a restaurant chain client, categorised ~**A\$12B** of spend cutting a 1-1.5 month cycle to a single day's model run, and forecast inventory within a 12.5-14% error margin below client tolerance. Seeking to bring this AI-first, client-facing analytical approach to Quantum's Financial Services Consulting practice.

KEY SKILLS

Programming and Analytics: Python, SQL, Statistical Analysis, Anomaly Detection, Hypothesis Testing, Feature Engineering, Time-Series Forecasting

AI and LLM: Claude, ChatGPT, Agentic AI Workflows, Multi-Agent Orchestration, AI Output Evaluation, NLP/Sentiment Analysis, Prompt Engineering

Visualisation and BI: Tableau (16+ dashboards), Power BI, Data Storytelling, KPI Analytics, Executive Dashboards

ML and Data Science: scikit-learn, TF-IDF/NLP, Logistic Regression, Prophet, Classification, Cross-Validation, Class-Imbalance Handling

Consulting and Cloud: Client-Facing Delivery, Problem Framing, Stakeholder Communication, QA Documentation, Azure, AWS, Databricks

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

- Owned the end-to-end analytics account for a restaurant chain (AU/UK) as sole analyst: ran bi-weekly progress meetings with CFO, CPO, category managers and general managers, structured ambiguous cost problems into testable hypotheses, and surfaced ~**A\$2M/year** in savings (~30%) in their largest procurement category through price-movement and cost-leakage analysis.
- Designed and deployed a company-wide agentic report-generation workflow (Claude): rolled out across the full analyst team (~25-30 client accounts), replacing manual per-client report assembly and saving ~**12-15 hours per week** across the business.
- Built an LLM-powered call-transcript analyser - scoring call quality, sentiment, and expectation-setting - placed **1st in an internal AI hackathon** and was adopted into the company's operational workflow, demonstrating agentic AI moving from prototype to production.
- Led the company's first ML spend-categorisation project: designed a one-vs-all binary classifier (TF-IDF, feature engineering, class-imbalance handling, cross-validation, hyperparameter tuning) over ~**A\$12B of client spend** across 5 years, cutting the categorisation cycle from **1-1.5 months to a single day's model run**; the documented pipeline is now being rolled out across clients.

- Developed a multi-agent data QA validation system (5 specialist agents + orchestrator, Claude) to validate client datasets prior to delivery, applying AI-output evaluation at each step to flag where model outputs required human scrutiny before sign-off.
- Built a Prophet time-series forecasting model (Python) for a fresh-produce client, incorporating sea-freight trends and external price drivers to predict 3-month raw material and chemical requirements - achieved a **12.5-14% error margin**, comfortably below the client's stated tolerance.
- Conducted hypothesis-driven anomaly detection across enterprise procurement datasets - framing vague cost-leakage concerns into structured analytical investigations without a predefined brief - contributing to **~15% in client savings**.
- Built and maintained 20+ automated ETL pipelines (Python, SQL, Azure) processing millions of transactions monthly and 16+ Tableau dashboards enabling spend tracking, KPI monitoring, and supplier negotiation decisions for enterprise clients.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a distributed anomaly-detection pipeline (Databricks, PySpark) improving detection accuracy 20%; engineered scalable transformation layers for cloud procurement data.
- Deployed a Power BI analytics solution adopted by senior Department of Transport stakeholders; presented model architecture and outcomes to cross-functional non-technical audiences.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave sensor data using statistical models (MATLAB), improving prediction accuracy 20% and contributing to 10% improvement in defence equipment design efficiency.
- Compiled findings into a 70-page structured report, translating quantitative outputs into clear, documented recommendations for defence engineering teams.

PROJECTS

Job Hunt OS - Agentic AI Career System (Python, Claude Code, Multi-Agent)

- Designed and built a multi-agent AI system (orchestrator + 3 specialist agents) running natively on Claude Code: automates resume tailoring to JD, builds ATS-friendly PDFs, drafts cover letters, runs two-track networking (reactive applications + proactive relationship CRM), and syncs calendar reminders via MCP - with no paid APIs.
- Demonstrates production agentic system design: prompt engineering, multi-agent orchestration, file-based data modelling, scheduled cloud routines, and a human review gate at each output stage.

EDUCATION

Master of Data Science, Monash University | Feb 2022 - Dec 2023

Coursework: Statistics I/II, Machine Learning, Applied Forecasting, High Dimensional Analysis, Communicating with Data

Bachelor of Engineering, Thapar University | May 2017 - May 2021
