Hiring Manager | Data Analyst (Tableau) | Remote

Dear Hiring Manager,

I am writing to apply for the Data Analyst (Tableau) role. The work as described, gathering and cleaning data from multiple sources, building interactive dashboards and KPI scorecards in Tableau, writing the SQL underneath, and presenting findings in plain language to non-technical business stakeholders, is precisely how I spend my working week. The fit is direct, not a stretch.

The clearest proof is a restaurant-chain client I have owned as the sole analyst at a procurement analytics consultancy. I structured a product catalog of roughly 3,000 to 3,500 items, built Tableau dashboards that track price movements and cost leakage down to the product, venue, and supplier level, and ran bi-weekly meetings directly with the CFO, Chief Procurement Officer, and category managers to walk through the data and translate it into decisions. That work identified roughly A\$2M in savings in one spend category. It is a complete example of the cycle this role is hiring for: messy multi-source data, clean SQL extraction, purposeful dashboard design, and findings that land with the people who hold the budget.

Across the consultancy I have shipped 16+ production Tableau dashboards for enterprise procurement and finance teams, applied anomaly detection to surface cost-leakage patterns contributing to roughly 15% in client savings, and deployed a Power BI solution adopted by senior Department of Transport stakeholders. I have built those dashboards on a solid SQL and Python base, writing the queries, doing the data cleaning, and validating accuracy before anything reaches a client. I also brought in time-series forecasting (Prophet) for an inventory-planning client, delivering a 3-month forward view at a 12.5 to 14% error margin well within the client's accepted tolerance. Analytics that reach the right people, told clearly, is the thread across all of it.

I come from a procurement and government analytics context rather than a generalist corporate one, but the analytical methods, the BI tooling, and the stakeholder-facing workflow are directly transferable. I am comfortable picking up new domains quickly and have done so with each new client account. I would welcome the chance to bring this experience into your team and contribute from day one.

Thank you for considering my application. I am happy to share examples of my Tableau work or discuss the role further at your convenience.

Sincerely,

Dhruv Nirmal
