Hiring Manager, Melbourne Water, Docklands / Brooklyn VIC

Dear Hiring Manager,

I am applying for the Data Analyst (EA Level 7) role in the Works Delivery team. What drew me to it is that the work is essentially the problem I solve every day: taking maintenance and operational data spread across different systems and service providers, making it consistent and trustworthy, and turning it into the performance metrics and reporting that actually shape how the work gets done. Doing that for an organisation whose analysis keeps water and treatment assets reliable for millions of Victorians is exactly the kind of meaningful, data-heavy work I want to be part of.

In my current role at Purchasing Index Data Analytics, I own the end-to-end analytics for the company's largest client, around six million work-order-level transaction rows drawn from many sources. I standardised data capture across thirteen external submitters, replaced a manual process with automated SQL Server ingestion, and built the quality controls (automated row and column checks, data-type validation, discrepancy logging routed back to the right teams) that keep those records clean and report-ready. On top of that pipeline I deliver the dashboards and exception reporting that stakeholders use to track supplier and service-provider performance, spot trends, and act on them. The domain differs from maintenance, but the analytical discipline of trusted data feeding decisions is the same.

The part I find most energising is building AI into that workflow. I have shipped a multi-agent data-validation system that catches integrity issues before delivery, and an automated reporting workflow that cut delivery turnaround by roughly half. This is a genuine edge for the role, which clearly values using AI to streamline existing processes, and it is something most analysts from a maintenance background will not have done in production.

I would welcome the chance to discuss how my experience in operational analytics, data-quality programs, BI delivery, and AI-driven automation can support the Works Delivery team. I hold a Victorian Driver's Licence and am available to travel to Melbourne Water sites as the role requires, and you can reach me at dhruvnirmal2111@gmail.com or +61 406 259 619.

Yours sincerely,

Dhruv Nirmal
