PROFESSIONAL SUMMARY

I'm a data analyst who works closely with stakeholders to turn business questions into reporting they can actually use. I run BI and reporting across five enterprise client accounts, taking each request from what the stakeholder really needs through to the SQL, the Power BI or Tableau dashboard, and the conversation about what it shows. I care as much about the data being right and well documented as about the report sitting on top of it. On one account, the pricing analysis I structured helped the client find around A\$2M in savings in one spend category.

KEY SKILLS

Analytics & BI: Advanced SQL, Power BI, Tableau, Microsoft Excel, Data Storytelling, KPI Dashboards, BAU and Ad Hoc Reporting, Requirements Gathering

Data & Programming: Python, Data Modelling, Data Cleaning, ETL Pipelines, Data Validation and Quality Checks, KNIME

Cloud & Platforms: Azure, Databricks, PySpark, AWS, Docker

Stakeholder & Delivery: Stakeholder Management, Client Relationship Ownership, Documentation and Process Standardisation, Data Literacy Enablement, Cross-functional Collaboration

AI & Automation: LLM and agentic workflow automation (Claude, ChatGPT), AI-output QA and validation, scaled team adoption

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

Client-facing analytics consultancy; independently manage BI delivery, stakeholder relationships and reporting for enterprise clients across Australia and New Zealand in an Azure-hosted data warehouse environment.

- Independently manage BI delivery and stakeholder relationships across five enterprise client accounts, translating business needs into reporting and presenting outputs directly to senior executives.
- Owned a restaurant-chain client account end to end as sole analyst: structured a product catalog of roughly 3,000 to 3,500 items, built a pricing-decision dashboard tracking price movements across categories and suppliers, and ran bi-weekly stakeholder meetings with the CFO, Chief Procurement Officer, category managers and general managers, helping the client identify roughly A\$2M in savings in one major spend category.
- Designed, built and maintained 16+ Tableau dashboards for procurement and finance teams, giving stakeholders self-service visibility into supplier spend, category-level KPIs and cost-optimisation opportunities.
- Promoted self-service and data literacy: documented metrics and definitions and built dashboards stakeholders could explore on their own, reducing repeat manual reporting requests.
- Built AI-driven automation adopted across the whole analyst team, not just by me: an LLM-based workflow that auto-generates client reports and saves roughly 12 to 15 hours a week, paired with a multi-agent QA step that validates outputs before they reach a client, so the automation stays accurate and governed at scale.

- Manage the end-to-end data for the company's largest client account, spanning 5 global regions, 13 sub-regions and multiple source datasets: coordinate directly with the regional teams and data owners who supply the data, standardise file-submission and naming conventions across every region, run automated data validation that flags row and format discrepancies and logs issues for review, and document the process so it stays consistent.
- Automated 20+ recurring SQL and Python reporting processes handling millions of transactions monthly, meeting BAU reporting SLAs and cutting manual reporting effort roughly 40%.
- Performed anomaly detection on procurement datasets to surface cost-leakage patterns, contributing to roughly 15% in cost savings across client accounts.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built and delivered a Power BI analytics solution that was adopted by senior Department of Transport stakeholders; presented architecture and outcomes to cross-functional teams.
- Built a distributed anomaly-detection pipeline (Databricks, PySpark) on government procurement data, improving detection accuracy roughly 20%.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave datasets using statistical models and filtering techniques, then compiled findings into a 70-page technical report (MATLAB, Excel) for research stakeholders.

PROJECTS

MyFacit: Analytics and Decision-Support Platform (SQL, Python, BI, Forecasting)

- Built a centralised analytics platform for a small hospitality business, integrating 8+ data sources into one consistent model with dashboards and short-term forecasting that surface insights for pricing, product mix and day-to-day operations. Now in pilot with a local business, with weekly sessions to refine it in a real setting.

Global Multi-Region Spend Analytics Platform (SQL, Python, Azure, BI dashboards)

- Own the end-to-end pipeline for the company's largest client account (5 regions, 13 sub-regions, roughly 6 million invoice rows). Replaced a manual upload process with automated email-based ingestion, standardised naming and submission conventions across all regions, and built automated validation that catches and logs discrepancies before they reach a dashboard, cutting weekly processing time from 4 to 5 hours down to roughly 75 minutes.

Power BI Analytics Platform, Dept of Transport (Power BI, Databricks, PySpark)

- Designed and deployed a Power BI analytics solution for Victorian government procurement data; presented findings to senior Department of Transport stakeholders and cross-functional teams, where it was adopted for ongoing use.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Statistics I and II, Machine Learning, Applied Forecasting, Communicating with Data, High Dimensional Analysis

Bachelor of Engineering, Thapar University | May 2017 to May 2021

Mathematics I/II/III, Statistics, Analog and Digital Electronics
