Hiring Team, Growe

Dear Hiring Team,

I'm writing about the Middle Data Analyst role at Growe. Most of my work over the past two years has been sitting inside a business team rather than beside it: taking a stakeholder's rough question, working out what they actually need to decide, and coming back with a SQL query, a Tableau dashboard, or a clear recommendation they can act on without asking me to explain it twice. That's the shape of this role as you've described it, end to end ownership from requirements through to presenting the result, and it's the part of the work I do best and enjoy most.

The clearest proof of that is a pricing and cost engagement I ran for a multi-venue restaurant group across Australia and New Zealand. The brief when I started was thin: the client believed they were overspending on supplier costs but had no dataset to show where. I owned the account on my own, built a product catalogue from scratch to make the spend analysable, then built a Tableau dashboard that traces cost leakage down to product, venue and supplier. I presented findings every two weeks directly to their Chief Procurement Officer and category managers, and the work helped them find close to A\$2M in savings in their largest category over the year, savings they used at the negotiating table.

Data accuracy is the other half of how I work, not an afterthought. On my firm's largest client account, spend data lands weekly across five regions and thirteen sub-regions, roughly six million invoice rows in total. I built the automated validation that checks row counts, data types and column consistency before anything reaches a report, and standardised how every region submits data so discrepancies get caught rather than discovered downstream. That same instinct, treat a number as unproven until it's been checked, is what I'd bring to keeping your reusable datasets and dashboards reliable as the analytics function scales.

The discipline behind this role, defining a business metric precisely, tracing what's driving a number up or down, and presenting the answer so a non-technical stakeholder can act on it, is exactly the discipline I've run for two years on procurement and supplier spend data, and it carries over directly to revenue, customer and retention metrics. A fully remote, anywhere role is also exactly the setup I already operate in day to day with clients I've never met in person, so the working model is a genuine fit, not just the tools. I'd welcome the chance to talk through how that experience applies to your data.

Thank you for considering my application. I'd be glad to talk further at your convenience.

Regards,

Dhruv Nirmal
