Hiring Team, Financial Services Consulting Practice, Quantum, Australia

Dear Hiring Team,

I'm applying for the Data Scientist (Consulting) role in Quantum's Financial Services practice. A role that pairs genuine consulting with an AI-first delivery model, and expects data scientists to use AI with judgement rather than at face value, is a rare match for how I already work.

At Purchasing Index Data Analytics (part of Comprara Group), a data and analytics consulting firm, I run five enterprise client accounts on my own, taking each from a loosely defined problem through to a recommendation the client can act on. On one, a restaurant chain across Australia and New Zealand, I ran the relationship directly with the CFO, Chief Procurement Officer and category managers, and built pricing and supplier dashboards that turned a vague concern about overspending into roughly A\$2M a year in savings in their largest category.

I also build with AI in production rather than just experiment with it: a company-wide Claude workflow that generates client progress reports and saves the team 12 to 15 hours a week, and a multi-agent QA system that scrutinises model output before it reaches a client. On the data science side, I led our first ML spend-categorisation project, classifying roughly A\$12B of client spend and cutting a manual cycle from over a month to a single day's model run.

What draws me to Quantum is the combination of consulting breadth and an AI-first practice across insurance, banking, super and wealth. The methods I work in map straight onto those problems: anomaly and cost-leakage detection, hypothesis-driven investigation, and statistical and ML modelling on large-scale transaction data. I pick up new domains quickly, and I'd bring the same independent, client-first approach to your financial services engagements.

I'd welcome the chance to talk about how I could contribute.

Sincerely,

Dhruv Nirmal
