Hiring Team, Quantum (wiq), Melbourne

Dear Hiring Team,

I am writing to apply for the Data Scientist role on the wiq team. I like how this role is described: sophisticated analytics work paired with growing commercial acumen, delivered close to the business rather than at arm's length from it. That is exactly how I already work. In my current role at a data and analytics consultancy, I own client engagements from an ambiguous first brief through to a stakeholder-ready recommendation, and I would bring that same ownership to Woolworths' pricing, ranging and supply chain problems.

The clearest proof of that fit is a pricing and cost analytics engagement I ran as the sole analyst on the account for a multi-venue restaurant group across Australia and New Zealand. I built a product catalogue of roughly 3,000 items and a pricing-decision dashboard that tracked price movement and cost leakage down to product, venue and supplier level, then presented the findings directly to the client's Chief Procurement Officer and category managers. That work helped surface close to 30% savings, roughly A\$2M, in their largest spend category, used directly in supplier negotiations. It is the same discipline wiq applies to pricing and ranging at Woolworths' scale: turning a commercial question into a clear, defensible recommendation a non-technical stakeholder can act on.

Alongside that, I have built genuine statistical and ML depth in production settings. I led a one-vs-all logistic regression classifier that structured roughly A\$12B of a client's spend data, cutting a categorisation cycle from over a month to a single day's run, and I built a Prophet forecasting model for a fresh-produce client that planned raw-material inventory three months ahead within a 12.5 to 14% error margin. Both moved from a manual, judgment-heavy process to a repeatable, documented pipeline. I have also built agentic AI workflows in production, including an independent verification agent that checks a report's numbers before a client sees it, work I would bring to a team that is genuinely building AI into how it delivers, not just talking about it.

What draws me to wiq specifically is the model itself: Quantum's data science depth paired with Woolworths' scale and retail expertise, working across loyalty, personalisation, eCommerce and supply chain for 20 million customers a week. My background sits right at that intersection of statistical rigour and commercial translation, and the retail domain is a natural extension of the pricing, ranging and supplier work I already do, just applied to a bigger canvas with more levers to pull. I would welcome the chance to talk through how I could contribute to the team.

Thank you for your consideration, and I look forward to hearing from you.

Sincerely,

Dhruv Nirmal
