PROFESSIONAL SUMMARY

I'm a data analyst who takes an ambiguous business question, frames it with the stakeholder, and delivers a recommendation people can act on, not just a chart. I run analyses end to end: writing the SQL, modelling the data, building the dashboard, and translating it into plain language for non-technical audiences. On one account, the analysis I put together helped a client find around **A\$2M** in savings. I'm strong in SQL and Python (pandas), work in Tableau and Power BI, and keep clear metric definitions and documentation so everyone works from the same numbers.

KEY SKILLS

Analytics: SQL (joins, window functions, CTEs, transaction and event-level data), exploratory data analysis, framing ambiguous problems, recommendations, metric definition and documentation

BI & Dashboards: Tableau, Power BI, self-serve dashboards, data storytelling, KPI and BAU reporting

Data & Programming: Python (pandas, numpy), data modelling, data cleaning, data validation and quality, Snowflake, Databricks, ETL, Git and version control

Stakeholder: partnering with non-technical stakeholders, written memos, presenting findings to senior leaders

Modelling (supporting): classification, time-series forecasting (Prophet), anomaly detection, scikit-learn

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

A data and analytics consultancy. I own analyses end to end for enterprise clients, framing the question with the stakeholder and delivering a recommendation they act on. Selected engagements:

Framing an ambiguous question into a recommendation - restaurant group (AU/NZ)

- Problem: the client felt their costs were too high but couldn't say where, so there was no defined brief, just a vague concern.
- Approach: scoped it into testable questions, built a product catalogue (~3,000 items) and a pricing dashboard tracking cost leakage by product, venue and supplier using SQL and Python (pandas), and presented a clear recommendation to the Chief Procurement Officer and category managers.
- Result: helped them find close to 30% savings, roughly **A\$2M** over a year, in their largest category, used directly in supplier negotiations.

Dashboards, self-serve tooling and metric definitions - enterprise clients

- Built and maintained 16+ Tableau dashboards that stakeholders use weekly for spend, KPIs and cost decisions.
- Documented metrics and definitions so stakeholders could self-serve and everyone worked from one canonical definition, cutting repeat manual requests.

Data hygiene and reproducibility - largest client account (multi-region)

- Coordinate data across 5 regions and 13 sub-regions with the teams that own it; standardised conventions and built automated validation that flags issues before they reach a report, with documented, reproducible processes.

Reporting automation - internal, my own firm

- Built an internal workflow that auto-generates client reports from analytics outputs, with a QA check on the output; adopted across the analyst team (around 25 to 30 accounts), saving roughly 12 to 15 hours a week.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a distributed anomaly-detection pipeline in Databricks with PySpark on large-scale government data, and delivered the findings through a Power BI solution adopted by senior Department of Transport stakeholders; detection accuracy improved by about 20%.

PROJECTS

Facit: Profitability Product for Independent Cafes

- Built a multi-tenant SaaS that unifies a cafe's POS, wages and supplier invoices into one weekly profitability view, with revenue forecasting, menu engineering and clearly-defined metrics (wage cost %, food cost %, gross margin). Live with a cafe as design partner; product-style analytics built for messy real-world data and a non-technical operator.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Bachelor of Engineering, Thapar University | May 2017 to May 2021
