PROFESSIONAL SUMMARY

I build the reporting and data-integrity checks that keep inventory and transactional records accurate and catch discrepancies before they compound. For enterprise clients I have built automated inventory reports that teams rely on daily to manage stock, including par-level alerts that flag any item below a set threshold, and I run the validation and reconciliation across a global platform spanning 13 regions and roughly 6 million invoice rows, standardising intake and logging discrepancies at the source. My Master of Data Science included Supply Chain Management and Applied Forecasting, and I want to bring this discipline to Global Power Components as an Inventory Control Analyst.

KEY SKILLS

Inventory & Data Integrity: Discrepancy and variance investigation, reconciliation analysis, root-cause analysis, par-level alerting, data standardisation across systems, transactional-data validation

Reporting & BI: Power BI, Tableau, KPI and inventory dashboards, advanced Excel (pivot tables, lookups, data analysis), stakeholder reporting

Data & Systems: SQL, Python (pandas, numpy), SQL Server, enterprise ERP/MRP-adjacent transactional data (invoice, PO, spend), KNIME, batch automation, Prophet forecasting

EXPERIENCE

Data Analyst, PI Data Analytics (Comprara Group) | Jun 2024 to Present | Melbourne

Client-facing analytics for enterprise clients across Australia and New Zealand: monitoring data for accuracy, resolving discrepancies, and standardising intake across systems, with proactive written updates so distributed clients stay aligned.

- Built automated inventory reports for clients (a daily morning refresh and a weekly one) that teams use day to day to manage stock, with par-level alerts that flag any item below a client-set threshold so they reorder before a stockout.
- Built a bill of materials for a fresh-produce client, mapping finished products to the raw materials and inputs they require, to support inventory planning and purchasing.
- Manage automated validation across a global spend platform (13 regions, roughly 6 million invoice rows, about 500 to 600k refreshed weekly) that flags discrepancies, drops stray columns, and standardises intake; liaise directly with the client's IT and system teams to resolve data gaps at the source.
- Reconcile pricing and spend to the product, venue and supplier level for a multi-venue client, tracing cost variance to root cause and helping surface roughly 30% savings (about A\$2M) in one category; separately led classification and reconciliation of a roughly A\$12B, five-year spend dataset, cutting a month-long categorisation cycle to about a day.
- Built a Prophet time-series model forecasting raw-material and chemical inventory around three months ahead within a 12.5 to 14% error margin, and maintain 16+ Tableau dashboards and KPI reports for procurement and finance stakeholders.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI) | Aug 2023 to Nov 2023 | Melbourne

- Built a distributed anomaly-detection pipeline (Databricks, PySpark) on government procurement data, improving detection accuracy about 20%, and delivered a Power BI solution adopted by Department of Transport stakeholders.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023 - coursework in Supply Chain Management and Applied Forecasting

Bachelor of Engineering, Thapar University | May 2017 to May 2021
