

Dhruv Nirmal

Melbourne, Australia | dhruvnirmal2111@gmail.com | +61 406 259 619 | LinkedIn

Tailored Executive Summary

Data analytics and AI consultant with 2+ years of production experience delivering client-facing analytics engagements for enterprise clients across Australia and New Zealand. Proficient in Python, SQL, and statistical analysis, with a daily, in-production track record of building agentic AI workflows using Claude -- including a multi-agent QA pipeline and LLM-driven automated report generation -- going well beyond casual AI experimentation. Experienced in framing ambiguous procurement and operational problems into clear analytical plans, communicating data-driven insights to senior executives, and building reusable, well-documented analytical systems. Eager to bring this AI-first, consulting-oriented approach to Quantum Financial Services Consulting.

Key Skills

Programming and Analytics: Python, SQL, Statistical Analysis, Anomaly Detection, Hypothesis Testing, Feature Engineering, Forecasting Models, KNIME

AI and LLM: Claude, ChatGPT, Agentic AI Workflows, Multi-Agent Orchestration, LLM Sentiment Analysis, Automated Report Generation

Visualisation and BI: Tableau, Power BI, Data Storytelling, KPI Analytics, Executive Dashboards

Cloud and Infrastructure: Azure, AWS (S3, Lambda, EC2, IAM), Databricks, Snowflake, Docker, Terraform

Consulting and Communication: Client-Facing Delivery, Problem Framing, Stakeholder Presentations, QA Documentation, Insight Communication

Experience

Data Engineer, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

Client-facing analytics consulting role; supplier and transaction datasets for enterprise clients across Australia and New Zealand.

AI-First Analytics and Delivery

- Built an agentic AI workflow using Claude to auto-generate structured client progress reports from analytics outputs, reducing report turnaround time and enabling analysts to focus on interpretation rather than formatting.
- Developed a multi-agent data QA validation system (5 specialist agents plus orchestrator, built with Claude) to validate client datasets prior to delivery, applying critical judgement to flag where AI outputs required human review before client sign-off.
- Implemented an LLM-driven sentiment analysis workflow on sales call transcripts to surface customer sentiment trends and support client decision-making, demonstrating AI use that goes from experimentation into production building.
- Built an automated presentation-generation workflow using Claude to convert analytics outputs into structured PowerPoint deliverables, eliminating a manual production step from each client engagement.
- Integrated LLM tools (Claude, ChatGPT) into analytics script development workflows to accelerate delivery across client engagements, consistently applying scrutiny to where AI outputs required verification before use.

Analytical Problem Framing and Insight Delivery

- Performed anomaly detection on procurement datasets across enterprise clients, identifying cost-leakage patterns and contributing to approximately 15% in client savings; structured as a hypothesis-driven investigation from ambiguous spend data rather than a predefined brief.
- Built a binary classification model (TF-IDF and Logistic Regression) to categorise transaction descriptions at scale, cutting manual classification effort by 40% and improving data quality for downstream analytics.
- Built an ML model to predict chemical consumption for an industrial client, translating a vague production planning problem into a structured forecasting solution that improved inventory management outcomes.

- Communicated technical outputs and analytical findings as actionable insights and recommendations to senior executives across 5 enterprise clients, bridging technical depth with commercial clarity.

Data Engineering and Visualisation

- Built and maintained 20+ automated ETL pipelines processing millions of procurement transactions monthly across 5 enterprise clients (Python, SQL, batch files), deployed on Azure-hosted servers.
- Developed and maintained 16+ Tableau dashboards for procurement and finance teams to monitor supplier spend, track KPIs, and identify cost-optimisation opportunities, designed for non-technical stakeholders.
- Automated client reporting and analytics workflows (Python, SQL, KNIME), reducing manual reporting effort by 40% and improving delivery turnaround by 50%.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a distributed anomaly detection pipeline in Databricks using PySpark, improving detection accuracy by 20%, demonstrating application of statistical and data science methods to ambiguous real-world datasets.
- Deployed a Power BI analytics solution adopted by senior Department of Transport stakeholders, presenting system architecture and model outcomes to cross-functional non-technical audiences.
- Engineered scalable data transformation layers to process procurement data in cloud environments, producing clean, reusable outputs for downstream analysis.
- Presented analytical findings to senior government stakeholders, translating technical methods into plain-language recommendations with a clear next step.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave sensor data using statistical models to predict noise levels, improving prediction accuracy by 20% and contributing to a 10% improvement in defence equipment design efficiency.
- Applied signal filtering (Butterworth filter) to reduce noise in sensor data by 20%, demonstrating disciplined QA and documentation practice in a high-stakes analytical context.
- Compiled analytical findings into a 70-page structured report (MATLAB, Excel), translating quantitative outputs into clear, well-documented recommendations.

Education

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Relevant coursework: Statistics I/II, Machine Learning, Communicating with Data, Applied Forecasting, High Dimensional Analysis, Supply Chain Management, Web Application Development

Bachelor of Engineering, Thapar University | May 2017 to May 2021

Relevant coursework: Statistics, Mathematics I/II/III, Analog and Digital Electronics

Projects

Cloud Data Platform with Terraform (AWS, Snowflake, Docker, Power BI)

- Provisioned full cloud infrastructure using Terraform (S3, IAM, EC2, networking) with modular, version-controlled Infrastructure-as-Code patterns for reproducible multi-environment deployments (dev/staging/prod).
- Automated a data ingestion pipeline from external APIs to Snowflake, demonstrating end-to-end analytical platform design from raw data through to a consumable BI layer.
