PROFESSIONAL SUMMARY

I work with large, complex datasets to build the dashboards and KPI frameworks that let business teams make faster, better-informed decisions, plus the pipelines that keep those numbers reliable underneath. In my current data analyst role at a client-facing analytics consultancy, I maintain 20+ automated SQL and Python pipelines alongside 16+ Tableau dashboards used daily by procurement and finance stakeholders across five enterprise clients, work that has helped one client identify roughly A\$2M in category savings. I am used to turning an open-ended business question into a structured piece of analysis on my own, then presenting it plainly to non-technical stakeholders. Because I already work with distributed client teams, I default to clear written updates and documentation so people who are not in the room stay aligned. I would bring that same discipline, along with a genuine interest in applying statistics and machine learning where they add value, to the Data Analyst role at Sporty Group.

KEY SKILLS

SQL & Analysis: SQL (SQL Server, Snowflake), Python, statistical analysis, ad hoc analysis, data storytelling

BI & Dashboards: Tableau, Power BI, KPI design and monitoring, dashboard development, self-service reporting

ETL & Data Pipelines: automated Python/SQL pipelines, workflow scheduling, data validation, standardised data intake

Cloud & Data Warehousing: AWS (S3, Lambda, IAM, EC2), Azure, Snowflake, Terraform (IaC), relational database design

Machine Learning (applied, as needed): scikit-learn, logistic regression, Prophet forecasting, anomaly detection

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia (remote-capable client analytics consulting)

- Analyse large, complex supplier and transaction datasets in SQL across five enterprise clients, working independently to surface trends and cost-optimisation opportunities for procurement and finance stakeholders.
- Design and maintain 16+ Tableau dashboards that define and monitor core KPIs such as spend and supplier performance, giving stakeholders self-service access to daily reporting instead of waiting on ad hoc requests.
- Build and maintain 20+ automated ETL pipelines in Python and SQL that process millions of transactions monthly, standardising data intake across clients and keeping the reporting infrastructure stable and reliable.
- Own data quality and integrity on the firm's largest client account, spend data spanning 5 global regions and roughly 6 million invoice rows, by building automated validation, row and column consistency checks, that catch discrepancies before they reach the client.
- Translate ad hoc business questions from category managers and executives into structured analysis and clear written reports, presenting findings directly in bi-weekly and monthly stakeholder meetings.

- Keep documentation and proactive written updates current across five distributed client accounts so stakeholders who are not in the room stay aligned on data definitions, refresh schedules and known issues.
- Applied statistical anomaly detection to procurement datasets to flag cost-leakage patterns, contributing to roughly 15% savings for one client.
- Led a one-vs-all logistic regression classifier (scikit-learn) to categorise a roughly A\$12B, five-year client spend dataset, cutting a manual categorisation cycle from about six weeks to a single day's model run; separately built a Prophet time-series forecasting model for a fresh-produce client's raw-material and chemical inventory, accurate within a 12.5-14% error margin.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built and presented a Power BI analytics solution adopted by senior Department of Transport stakeholders, translating model outputs into clear insights for a non-technical audience.
- Built a distributed anomaly-detection pipeline (Databricks, PySpark) and engineered scalable transformation layers to process government procurement data, improving detection accuracy by about 20%.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Applied statistical modelling and signal filtering (Butterworth filter) to blast-wave data to predict noise levels, improving prediction accuracy by about 20%, and compiled findings into a 70-page technical report.

PROJECTS

Facit (myfacit.com), profitability analytics SaaS for independent cafes (Python, multi-source data integration, forecasting, BI)

- Built a multi-tenant analytics product that unifies POS transactions, staff wages and 14 suppliers' invoices into one weekly view of profitability for independent cafe owners.
- Define and own the KPIs it tracks (revenue, wage cost %, food cost %, gross margin) and produce a weekly "pulse" with one recommended action, alongside revenue forecasting, menu engineering and supplier price-creep detection.
- Live in day-to-day use with a design-partner cafe (Neighbours Cafe, St Kilda); weekly meetings drive bug fixes and product decisions. A genuine example of owning a live product's metrics and dashboards end to end.

Cloud Data Platform (Terraform, AWS, Snowflake, Power BI)

- Provisioned cloud infrastructure as code (S3, IAM, EC2) with Terraform and built an automated ingestion pipeline from external APIs into a Snowflake data warehouse.
- Modular, multi-environment design (dev/staging/prod), reinforcing hands-on relational database and data warehouse principles on top of AWS.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Coursework: Statistics I & II, Machine Learning, Communicating with Data, Applied Forecasting

Bachelor of Engineering, Thapar University | May 2017 to May 2021
