PROFESSIONAL SUMMARY

I'm a data analyst and engineer who works hands-on with real business data, from raw messy inputs through to dashboards and reports that help stakeholders make decisions. At PI Data Analytics I clean, validate, and transform millions of procurement transactions each month for enterprise clients, build SQL-driven analytics workflows, and maintain 16+ Tableau dashboards for procurement and finance teams. I'm comfortable writing complex SQL queries, producing ad-hoc and scheduled reports, and presenting findings in plain language to non-technical audiences, including C-suite executives. I bring a solid base in Python (Pandas, NumPy), Power BI, and cloud data platforms, and I'm drawn to roles where careful analytical work produces outputs the business can actually use.

KEY SKILLS

Analytics and Reporting: SQL (joins, aggregations, subqueries, window functions), Data Cleaning and Validation, Data Analysis, KPI Analytics, Ad-hoc Reporting, Excel (Pivot Tables, Power Query)

Visualisation and BI: Tableau, Power BI, Dashboard Development, Data Storytelling

Programming: Python (Pandas, NumPy), Statistical Analysis, Basic Statistical Modelling

Data Engineering and Cloud: ETL Pipelines, Data Warehousing, Azure, AWS, Snowflake, PostgreSQL, SQL Server

Competencies: Attention to Detail, Cross-functional Collaboration, Stakeholder Communication, Documentation, Problem Solving

EXPERIENCE

Data Analyst, Purchasing Index Data Analytics (Comprara Group)

Jun 2024 to Present | Melbourne, Australia

A data and analytics consulting firm serving enterprise clients across Australia and New Zealand.

Deliver end-to-end analytics for 5 enterprise client accounts: collect and validate data from multiple sources, build and maintain reporting pipelines, and present insights to stakeholders from operational teams through to C-suite.

- Collected, cleaned, and validated data from multiple sources across 5 enterprise clients, building 20+ automated ETL pipelines (Python, SQL) that process millions of procurement transactions monthly and flag data quality issues before delivery.
- Developed and maintained 16+ Tableau dashboards enabling procurement and finance teams to monitor supplier spend, track KPIs, and identify cost-optimisation opportunities.
- Wrote complex SQL queries (joins, aggregations, subqueries, window functions) to extract, transform, and analyse procurement datasets, supporting ad-hoc and scheduled reports for management and senior stakeholders.
- Performed data quality checks and troubleshooting on client datasets, building an automated validation workflow that catches discrepancies, logs them, and routes issues back to relevant teams prior to delivery.
- Identified cost-leakage patterns through anomaly detection analysis on procurement data, contributing to approximately 15% in savings across selected client accounts.

- Built a binary text classification model (Python, scikit-learn, TF-IDF) to automatically categorise transaction descriptions, reducing manual effort by 40% and cutting processing time from weeks to a single day.
- Owned the end-to-end data pipeline for the largest client: spend data across 5 global regions (~6M invoice rows refreshed weekly), with automated validation, data-type consistency checks, and discrepancy logging.
- Communicated analytical findings and dashboard outputs directly to senior executives (CFOs, CPOs, category managers), translating technical outputs into plain, actionable language.

Data Engineer Intern, Victorian Centre for Data Insights (VCDI)

Aug 2023 to Nov 2023 | Melbourne, Australia

- Built a distributed anomaly-detection pipeline (Databricks, PySpark), improving detection accuracy by 20%; engineered scalable data transformation layers for cloud procurement datasets.
- Deployed a Power BI analytics solution adopted by senior Department of Transport stakeholders; presented model architecture and data findings to cross-functional, non-technical audiences.

Research Data Analyst, Terminal Ballistics Research Laboratory (TBRL), DRDO

Jan 2021 to Jul 2021

- Analysed blast-wave sensor data using statistical models and Butterworth filtering (MATLAB, Excel), improving prediction accuracy 20% and contributing to a 10% improvement in defence equipment design.
- Compiled findings into a 70-page structured report, documenting methodology, data processes, and results for engineering stakeholders.

PROJECTS

Procurement Analytics Platform: Pricing and Supplier Dashboards (SQL, Python, Tableau)

- Owned end-to-end analytics for a restaurant chain (AU/NZ) as sole analyst: structured ~3,000 products into a categorised catalog, built a pricing-decision dashboard tracking price movements across products and categories, and a supplier-onboarding dashboard surfacing cheaper substitute products to guide smarter purchasing decisions.
- Presented findings in bi-weekly meetings with CFO, CPO, category managers and general managers, translating data outputs into recommendations that identified approximately **A\$2M** in annual savings (~30%) in the largest procurement category.

Cloud Data Platform with Terraform (AWS, Snowflake, Power BI)

- Provisioned full cloud infrastructure as code (Terraform: S3, IAM, EC2); built an automated ingestion pipeline from external APIs to Snowflake; connected to Power BI for end-to-end analytics delivery across dev, staging, and prod environments.

EDUCATION

Master of Data Science, Monash University | Feb 2022 to Dec 2023

Coursework: Statistics I/II, Applied Forecasting, Machine Learning, High Dimensional Analysis, Communicating with Data

Bachelor of Engineering, Thapar University | May 2017 to May 2021
